

# MC74HC393A

## Dual 4-Stage Binary Ripple Counter High-Performance Silicon-Gate CMOS

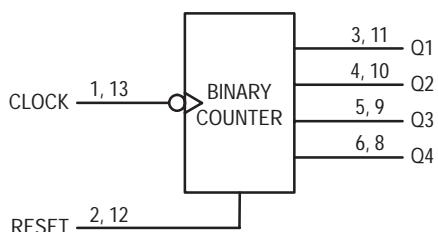

The MC74HC393A is identical in pinout to the LS393. The device inputs are compatible with standard CMOS outputs; with pullup resistors, they are compatible with LSTTL outputs.

This device consists of two independent 4-bit binary ripple counters with parallel outputs from each counter stage. A  $\div 256$  counter can be obtained by cascading the two binary counters.

Internal flip-flops are triggered by high-to-low transitions of the clock input. Reset for the counters is asynchronous and active-high. State changes of the Q outputs do not occur simultaneously because of internal ripple delays. Therefore, decoded output signals are subject to decoding spikes and should not be used as clocks or as strobes except when gated with the Clock of the HC393A.

- Output Drive Capability: 10 LSTTL Loads
- Outputs Directly Interface to CMOS, NMOS, and TTL
- Operating Voltage Range: 2 to 6 V
- Low Input Current: 1  $\mu$ A
- High Noise Immunity Characteristic of CMOS Devices
- In Compliance with the Requirements Defined by JEDEC Standard No. 7A
- Chip Complexity: 236 FETs or 59 Equivalent Gates

## MAXIMUM RATINGS\*

Symbol	Parameter	Value	Unit
$V_{CC}$	DC Supply Voltage (Referenced to GND)	–0.5 to +7.0	V
$V_{in}$	DC Input Voltage (Referenced to GND)	–0.5 to $V_{CC} + 0.5$	V
$V_{out}$	DC Output Voltage (Referenced to GND)	–0.5 to $V_{CC} + 0.5$	V
$I_{in}$	DC Input Current, per Pin	±20	mA
$I_{out}$	DC Output Current, per Pin	±25	mA
$I_{CC}$	DC Supply Current, $V_{CC}$ and GND Pins	±50	mA
$P_D$	Power Dissipation in Still Air, Plastic DIP† SOIC Package† TSSOP Package†	750 500 450	mW
$T_{stg}$	Storage Temperature	–65 to +150	°C
$T_L$	Lead Temperature, 1 mm from Case for 10 Seconds Plastic DIP, SOIC or TSSOP Package	260	°C

This device contains protection circuitry to guard against damage due to high static voltages or electric fields. However, precautions must be taken to avoid applications of any voltage higher than maximum rated voltages to this high-impedance circuit. For proper operation,  $V_{in}$  and  $V_{out}$  should be constrained to the range  $GND \leq (V_{in} \text{ or } V_{out}) \leq V_{CC}$ . Unused inputs must always be tied to an appropriate logic voltage level (e.g., either GND or  $V_{CC}$ ). Unused outputs must be left open.

\*Maximum Ratings are those values beyond which damage to the device may occur.

Functional operation should be restricted to the Recommended Operating Conditions.

†Derating — Plastic DIP: –10 mW/°C from 65° to 125°C

SOIC Package: –7 mW/°C from 65° to 125°C

TSSOP Package: –6.1 mW/°C from 65° to 125°C

For high frequency or heavy load considerations, see Chapter 2 of the ON Semiconductor High-Speed CMOS Data Book (DL129/D).

## RECOMMENDED OPERATING CONDITIONS

# MC74HC393A

## PIN DESCRIPTIONS

### INPUTS

#### Clock (Pins 1, 13)

Clock input. The internal flip-flops are toggled and the counter state advances on high-to-low transitions of the clock input.

### CONTROL INPUTS

#### Reset (Pins 2, 12)

Active-high, asynchronous reset. A separate reset is provided for each counter. A high at the Reset input prevents counting and forces all four outputs low.

### OUTPUTS

#### Q1, Q2, Q3, Q4 (Pins 3, 4, 5, 6, 8, 9, 10, 11)

Parallel binary outputs Q4 is the most significant bit.

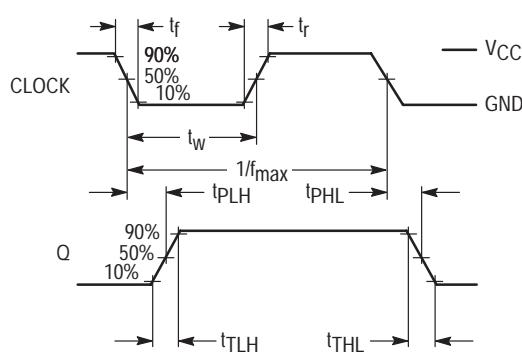

Figure 1.

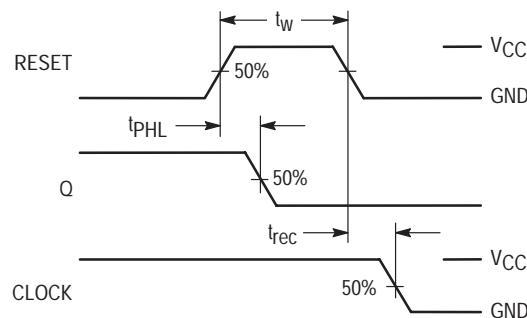

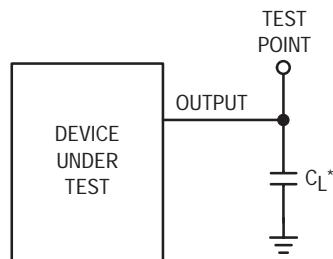

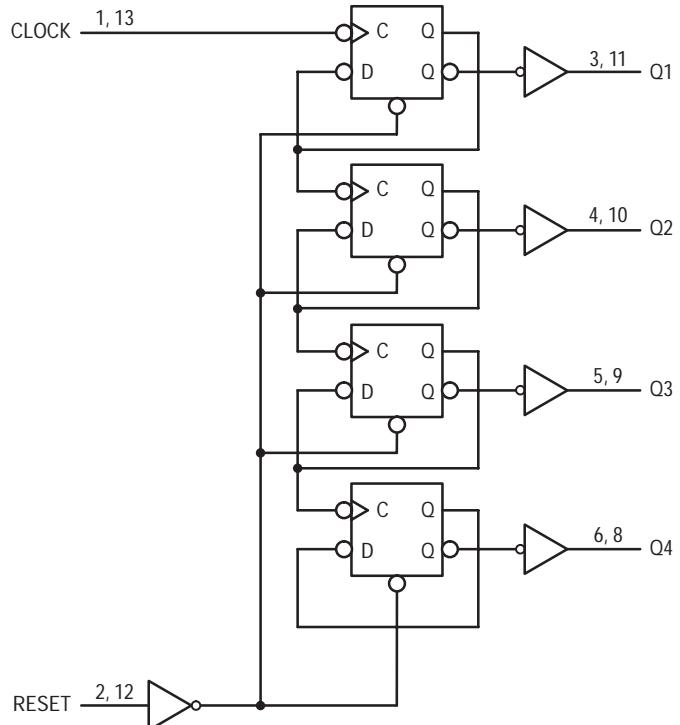

Figure 2.

\*Includes all probe and jig capacitance
