

PRELIMINARY

IRG4PC50W

INSULATED GATE BIPOLEAR TRANSISTOR

Features

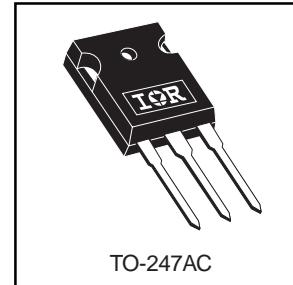

- Designed expressly for Switch-Mode Power Supply and PFC (power factor correction) applications
- Industry-benchmark switching losses improve efficiency of all power supply topologies
- 50% reduction of E_{off} parameter
- Low IGBT conduction losses
- Latest-generation IGBT design and construction offers tighter parameters distribution, exceptional reliability

$V_{CES} = 600V$
$V_{CE(on)} \text{ max.} = 2.30V$
$\text{@ } V_{GE} = 15V, I_C = 27A$

Benefits

- Lower switching losses allow more cost-effective operation than power MOSFETs up to 150 kHz ("hard switched" mode)
- Of particular benefit to single-ended converters and boost PFC topologies 150W and higher
- Low conduction losses and minimal minority-carrier recombination make these an excellent option for resonant mode switching as well (up to >300 kHz)
