CY2DL818

## 1:8 Clock Fanout Buffer

### Features

- Low voltage operation
- $V_{DD} = 3.3V$
- 1:8 fanout
- Single-input-configurable for LVDS, LVPECL, or LVTTL
- 8 pair of LVDS Outputs
- Drives either a 50-ohm or 100-ohm load (selectable)
- Low input capacitance
- Low output skew
- Low propagation delay
- Typical ( $t_{pd} < 4$  ns)
- Packages available include: TSSOP
- Does not exceed Bellcore 802.3 standards
- Operation at  $\geq 350$  MHz – 700 Mbps

### Description

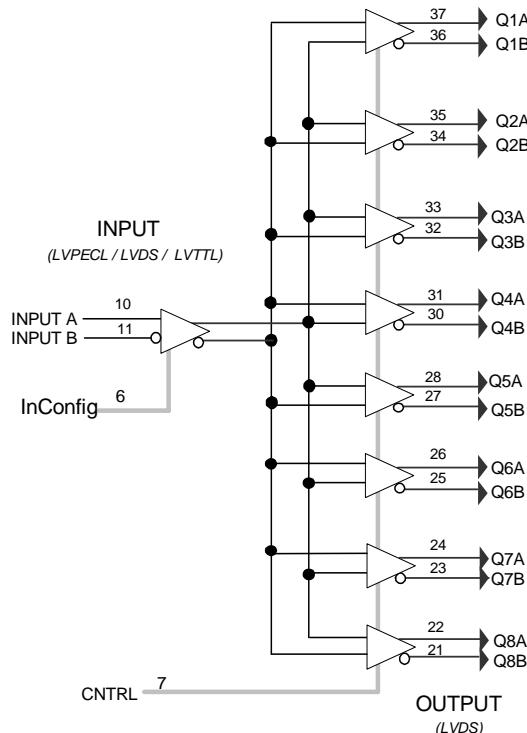

This Cypress series of network circuits is produced using advanced 0.35-micron CMOS technology, achieving the industry's fastest logic.

The Cypress CY2DL818 fanout buffer features a single LVDS or a single-ended LVTTL-compatible input and eight LVDS output pairs.

Designed for data communications clock management applications, the large fanout from a single input reduces loading on the input clock. The Cypress CY2DL818 is ideal for both level translations from single-ended to LVDS and/or for the distribution of LVDS-based clock signals.

The Cypress CY2DL818 has configurable input and output functions. The input can be selectable for LVCMS/LVTTL, LVPECL, or LVDS signals, while the output driver's support standard and high-drive LVDS. Drive either a 50-ohm or 100-ohm line with a single part number/device.

#### Note:

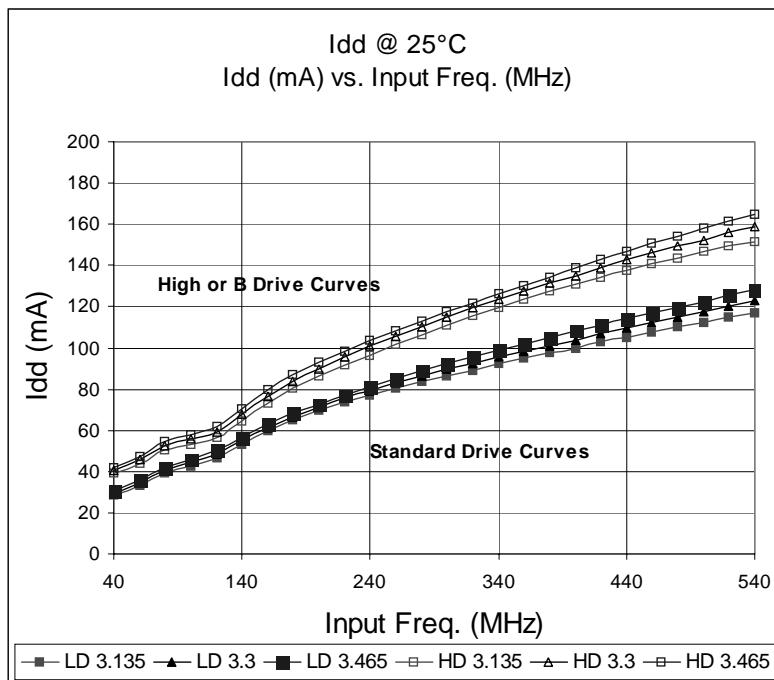

- Stresses greater than those listed under absolute maximum ratings may cause permanent damage to the device. This is intended to be a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operation sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
