Description

The IRIS4011(K) is a dual mode voltage and current controller combined with a MOSFET in a single package. The IRIS4011(K) is designed for use in universal and single input AC/DC and DC/DC switching power supplies and is capable of powers up to 60W for a universal line input. The device can operate in either a quasi-resonant or Pulse Ratio Control (PRC) mode, and thereby variable frequency operation.

Absolute Maximum Ratings

Absolute maximum ratings indicate sustained limits beyond which damage to the device may occur. All voltage parameters are absolute voltages referenced to terminals stated, all currents are defined positive into any lead. The thermal resistance and power dissipation ratings are measured under board mounted and still air conditions.
