

## 3.3V CMOS 12-BIT UNIVERSAL BUS DRIVER WITH PARITY CHECKER, DUAL 3-STATE OUTPUTS AND BUS-HOLD

IDT74ALVCH16903

### FEATURES:

- 0.5 MICRON CMOS Technology
- Typical  $t_{sk(0)}$  (Output Skew) < 250ps
- ESD > 2000V per MIL-STD-883, Method 3015;  
> 200V using machine model ( $C = 200\text{pF}$ ,  $R = 0$ )
- 0.635mm pitch SSOP, 0.50mm pitch TSSOP,  
and 0.40mm pitch TVSOP packages
- Extended commercial range of -40°C to +85°C
- $V_{cc} = 3.3V \pm 0.3V$ , Normal Range
- $V_{cc} = 2.7V$  to 3.6V, Extended Range
- $V_{cc} = 2.5V \pm 0.2V$
- CMOS power levels (0.4 $\mu\text{W}$  typ. static)
- Rail-to-Rail output swing for increased noise margin

### Drive Features for ALVCH16903:

- High Output Drivers:  $\pm 24\text{mA}$
- Suitable for heavy loads

### APPLICATIONS:

- 3.3V High Speed Systems
- 3.3V and lower voltage computing systems

### DESCRIPTION:

This 12-bit universal bus driver is built using advanced dual metal CMOS technology. This device has dual outputs and can operate as a buffer or an edge-triggered register. In both modes, parity is checked on APAR, which arrives one cycle after the data to which it applies. The  $\overline{YERR}$  output, which is produced one cycle after APAR, is open drain.

MODE selects one of the two data paths. When MODE is low, the device operates as an edge-triggered register. On the positive transition of the clock (CLK) input and when the clock-enable (CLKEN) input is low, data setup at the A inputs is stored in the internal registers. On the positive transition of CLK and when CLKEN is high, only data setup at the 9A-12A inputs is stored in their internal registers. When MODE is high, the device operates as a buffer and data at the A inputs passes directly to the outputs. The 11A/YERREN serves a dual purpose; it acts as a normal data bit and also enables  $\overline{YERR}$  data to be clocked into the  $\overline{YERR}$  output register.

When used as a single device, parity output enable (PAROE) must be tied high; when parity input/output (PARI/O) is low, even parity is selected and when PARI/O is high, odd parity is selected. When used in pairs and PAROE is low, the parity sum is output on PARI/O for cascading to the second ALVCH16903. When used in pairs and PAROE is high, PARI/O accepts a partial parity sum from the first ALVCH16903.

A buffered output-enable ( $\overline{OE}$ ) input can be used to place the 24 outputs and  $\overline{YERR}$  in either a normal logic state (high or low logic levels) or a high-impedance state. In the high-impedance state, the outputs neither load nor drive the bus lines significantly. The high-impedance state and increased drive provide the capability to drive bus lines without need for interface or pullup components.

The ALVCH16903 has been designed with a  $\pm 24\text{mA}$  output driver. This driver is capable of driving a moderate to heavy load while maintaining speed performance.

The ALVCH16903 has "bus-hold" which retains the inputs' last state whenever the input bus goes to a high-impedance. This prevents floating inputs and eliminates the need for pull-up/down resistors.

### ABSOLUTE MAXIMUM RATING (1)

| Symbol           | Description   | Max.                   | Unit |
|------------------|---|------------------------|------|
| $V_{TERM}^{(2)}$ | Terminal Voltage with Respect to GND                  | -0.5 to +4.6           | V    |
| $V_{TERM}^{(3)}$ | Terminal Voltage with Respect to GND                  | -0.5 to $V_{cc} + 0.5$ | V    |
| T <sub>STG</sub> | Storage Temperature                                   | -65 to +150            | °C   |
| I <sub>OUT</sub> | DC Output Current                                     | -50 to +50             | mA   |
| I <sub>IK</sub>  | Continuous Clamp Current, $V_I < 0$ or $V_I > V_{cc}$ | $\pm 50$               | mA   |
| I <sub>OK</sub>  | Continuous Clamp Current, $V_O < 0$                   | -50                    | mA   |
| I <sub>CC</sub>  | Continuous Current through each $V_{cc}$ or GND       | $\pm 100$              | mA   |
| I <sub>SS</sub>  |   |                        |      |

#### NOTES:

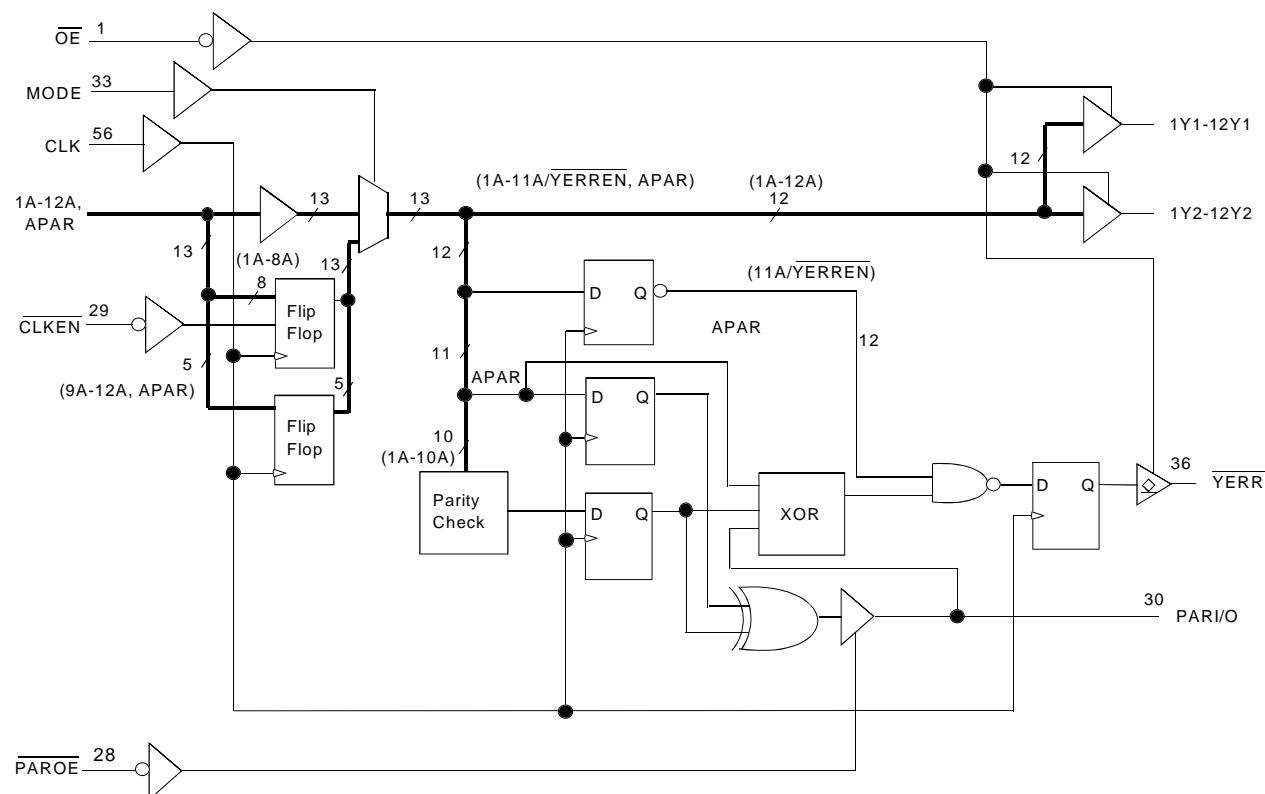

1. Stresses greater than those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
2.  $V_{cc}$  terminals.
3. All terminals except  $V_{cc}$ .

## NOTES:

1. H = HIGH Voltage Level  
L = LOW Voltage Level

Y<sub>0</sub> = Level of Y before the indicated steady-state input conditions were established

X = Don't Care

Z = High-Impedance

↑ = LOW-to-HIGH Transition

2. When used as a single device, PAROE must be tied high
3. Valid after appropriate number of clock pulses have set internal register

|                   |                                  |                 |                |      |                     |       | NEW16link |

**NOTES:**

1. Pins with Bus-hold are identified in the pin description.
2. Typical values are at Vcc = 3.3V, +25°C ambient.

**OUTPUT DRIVE CHARACTERISTICS xYx PORTS**

| Symbol          | Parameter                 | Test Conditions <sup>(1)</sup> |                           | Min.      | Max. | Unit |

NEW16link

### TEST CIRCUITS FOR ALL OUTPUTS

**DEFINITIONS:**

$C_L$  = Load capacitance: includes jig and probe capacitance  
 $R_T$  = Termination resistance: should be equal to  $Z_{OUT}$  of the Pulse Generator.

**NOTES:**

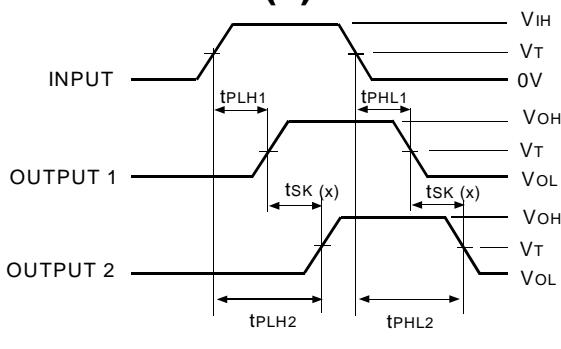

1. Pulse Generator for All Pulses: Rate  $\leq 10\text{MHz}$ ;  $t_F \leq 2.5\text{ns}$ ;  $t_R \leq 2.5\text{ns}$ .
2. Pulse Generator for All Pulses: Rate  $\leq 10\text{MHz}$ ;  $t_F \leq 2\text{ns}$ ;  $t_R \leq 2\text{ns}$ .

### SWITCH POSITION:

| Test            | Switch     |
|-----------------|------------|
| Open Drain      | $V_{LOAD}$ |
| Disable Low     |            |
| Enable Low      |            |
| Disable High    | GND        |
| Enable High     |            |
| All Other tests | Open       |

NEW16link

### OUTPUT SKEW - $t_{SK}$ (x)

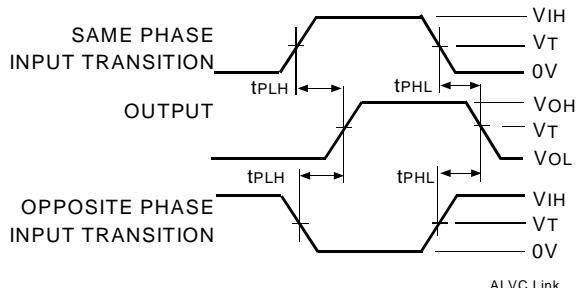

ALVC Link

**NOTES:**

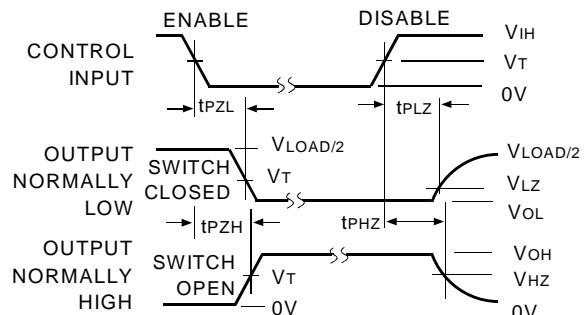

1. For  $tsk(o)$  OUTPUT1 and OUTPUT2 are any two outputs.
2. For  $tsk(b)$  OUTPUT1 and OUTPUT2 are in the same bank.

### PROPAGATION DELAY

## PARAMETER MEASUREMENT INFORMATION

**V<sub>CC</sub> = 2.7V AND 3.3V ± 0.3V**

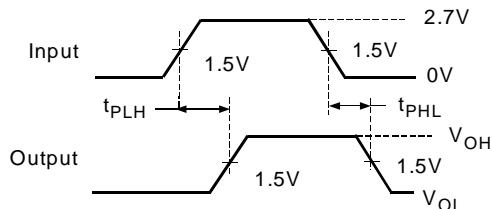

| TEST                               | S1   |
|------------------------------------|------|
| t <sub>pd</sub>                    | Open |
| t <sub>PLZ</sub> /t <sub>PZL</sub> | 6V   |
| t <sub>PHZ</sub> /t <sub>PZH</sub> | GND  |

### LOAD CIRCUIT

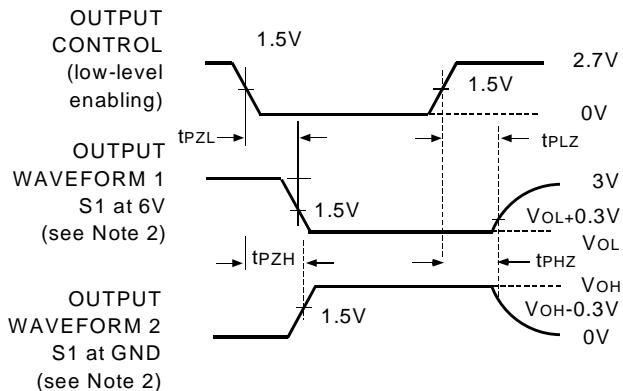

| YERR                          | S1 |
|-------------------------------|----|
| t <sub>PHL</sub> (see Note 8) | 6V |
| t <sub>PLH</sub> (see Note 9) | 6V |

### VOLTAGE WAVEFORMS SETUP AND HOLD TIMES

### VOLTAGE WAVEFORMS PULSE DURATION

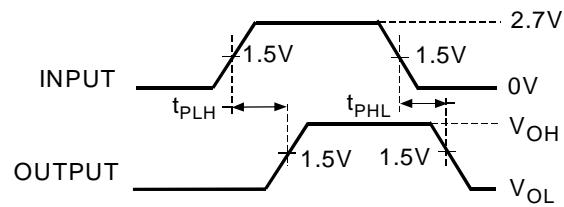

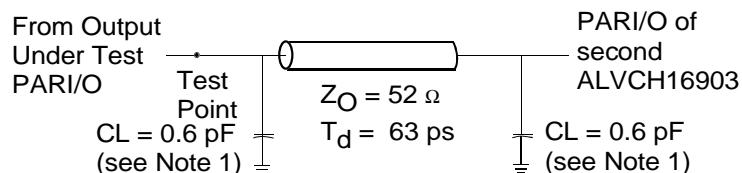

### VOLTAGE WAVEFORMS PROPAGATION DELAY TIMES

### VOLTAGE WAVEFORMS ENABLE AND DISABLE TIMES

#### NOTES:

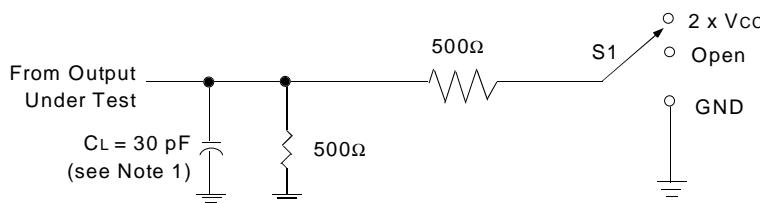

1. C<sub>L</sub> includes probe and jig capacitance.
2. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
3. All input pulses are supplied by generators having the following characteristics: PRR ≤ 10 MHz, Z<sub>O</sub> = 50Ω, tr ≤ 2 ns, tf ≤ 2 ns.
4. The outputs are measured one at a time with one transition per measurement.
5. t<sub>PLZ</sub> and t<sub>PHZ</sub> are the same as t<sub>dis</sub>.
6. t<sub>PZL</sub> and t<sub>PZH</sub> are the same as t<sub>en</sub>.
7. t<sub>PLH</sub> and t<sub>PHL</sub> are the same as t<sub>pd</sub>.
8. t<sub>PHL</sub> is measured at 1.5V.
9. t<sub>PLH</sub> is measured at V<sub>OL</sub> + 0.3V.

**LOAD CIRCUIT AND VOLTAGE WAVEFORMS****V<sub>cc</sub> = 2.7V AND 3.3V ± 0.3V****PARI/O LOAD CIRCUIT****NOTE:**

1.  $C_L$  includes probe and jig capacitance.

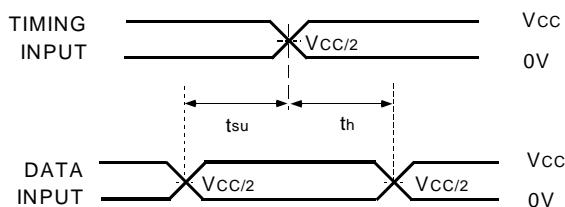

## PARAMETER MEASUREMENT INFORMATION

**$V_{CC} = 2.5V \pm 0.2V$**

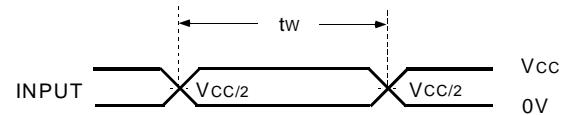

**LOAD CIRCUIT**

| TEST              | S1                |
|-------------------|-------------------|
| $t_{pd}$          | Open              |
