

## 54AC646

### Octal Transceiver/Register with TRI-STATE® Outputs

#### General Description

The 'AC646 consist of registered bus transceiver circuits, with outputs, D-type flip-flops and control circuitry providing multiplexed transmission of data directly from the input bus or from the internal storage registers. Data on the A or B bus will be loaded into the respective registers on the LOW-to-HIGH transition of the appropriate clock pin (CPAB or CPBA). The four fundamental data handling functions available are illustrated in *Figures 1, 2, 3, 4*.

- Multiplexed real-time and stored data transfers
- TRI-STATE outputs
- 300 mil slim dual-in-line package
- Outputs source/sink 24 mA
- 'ACT646 has TTL compatible inputs
- Standard Microcircuit Drawing (SMD)
  - 'AC646: 5962-89682

#### Features

- Independent registers for A and B buses
