

# 54ACT534 Octal D Flip-Flop with TRI-STATE® Outputs

### **General Description**

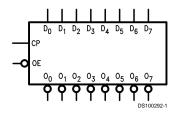

The 'ACT534 is a high-speed, low-power octal D-type flip-flop featuring separate D-type inputs for each flip-flop and TRI-STATE outputs for bus-oriented applications. A buffered Clock (CP) and Output Enable  $\overline{(\text{OE})}$  are common to all flip-flops. The 'ACT534 is the same as the 'ACT374 except that the outputs are inverted.

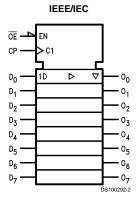

- Edge-triggered D-type inputs
- Buffered positive edge-triggered clock
- TRI-STATE outputs for bus-oriented applications
- Outputs source/sink 24 mA
- 'ACT534 has TTL-compatible inputs
- Inverted output version of 'ACT374
- Standard Microcircuit Drawing (SMD) 5962-8965801

#### **Features**

■ I<sub>CC</sub> and I<sub>OZ</sub> reduced by 50%

#### Pin Assignment for DIP and Flatpak

## Pin Assignment for LCC

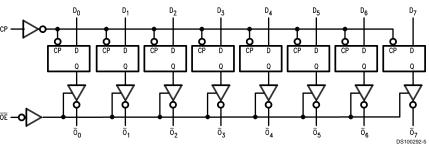

# **Functional Description**

The 'ACT534 consists of eight edge-triggered flip-flops with individual D-type inputs and TRI-STATE complementary outputs. The buffered clock and buffered Output Enable are common to all flip-flops. The eight flip-flops will store the state of their individual D inputs that meet the setup and hold

times requirements on the LOW-to-HIGH Clock (CP) transition. With the Output Enable (OE) LOW, the contents of the eight flip-flops are available at the outputs. When the  $\overline{\text{OE}}$  is HIGH, the outputs go to the high impedance state. Operation of the OE input does not affect the state of the flip-flops.

## **Logic Diagram**

Please note that this diagram is provided only for the understanding of logic operations and should not be used to estimate propagation delays.

#### **Function Table**

	Inputs		Output
СР	OE	D	ō
~	L	Н	L
~	L	L	Н
L	L	Χ	$\overline{o}_{o}$
X	Н	Χ	Z

- H = HIGH Voltage Level
- L = LOW Voltage Level X = Immaterial
- = LOW-to-HIGH Clock Transition
- Z = High Impedance  $\overline{O}_0$  = Value stored from previous clock cycle

#### **Absolute Maximum Ratings** (Note 1)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/ Distributors for availability and specifications.

V<sub>CC</sub> @ 4.5V, 5.5V 125 mV/ns

Note 1: Absolute maximum ratings are those values beyond which damage to the device may occur. The databook specifications should be met, without exception, to ensure that the system design is reliable over its power supply, temperature, and output/input loading variables. National does not recommend operation of FACT™ circuits outside databook specifications.

#### LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF NATIONAL SEMI-CONDUCTOR CORPORATION. As used herein:

- Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
- A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
