

## **54ACTQ821**

## Quiet Series 10-Bit D Flip-Flop with TRI-STATE® Outputs

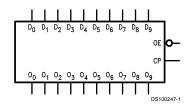

#### **General Description**

The ACTQ821 is a 10-bit D flip-flop with non-inverting TRI-STATE outputs arranged in a broadside pinout. The ACTQ821 utilizes NSC Quiet Series technology to guarantee quiet output switching and improved dynamic threshold performance. FACT Quiet Series™ features GTO™ output control and undershoot corrector in addition to a split ground bus for superior performance.

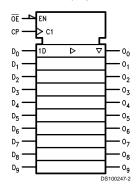

#### **Features**

- Guaranteed simultaneous switching noise level and dynamic threshold performance
- Non-inverting TRI-STATE outputs for bus interfacing
- 4 kV minimum ESD immunity
- Outputs source/sink 24 mA
- Functionally identical to the AM29821

## **Functional Description**

The ACTQ821 consists of ten D-type edge-triggered flip-flops. The buffered Clock (CP) and buffered Output Enable (OE) are common to all flip-flops. The flip-flops will store the state of their individual D inputs that meet the setup and hold time requirements on the LOW-to-HIGH CP transition. With  $\overline{\text{OE}}\ \text{LOW}$  the  $\underline{\text{contents}}$  of the flip-flops are available at the outputs. When  $\overline{\text{OE}}$  is HIGH the outputs go to the high impedance state. Operation of the  $\overline{\text{OE}}$  input does not affect the state of the flip-flops.

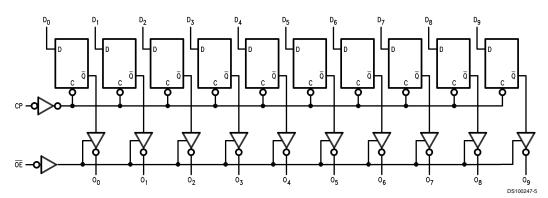

The ACTQ821 is functionally and pin compatible with the AM29821.

### **Function Table**

Inputs  OE CP D		Internal	Outputs	Function	
ŌĒ	СР	D	Q	0	
Н	\	L	L	Z	High Z
Н	~	Н	Н	Z	High Z
L	\	L	L	L	Load
L	~	Н	Н	Н	Load

- H = HIGH Voltage Level
- L = LOW Voltage Level Z = HIGH Impedance
- ∠ = LOW-to-HIGH Clock Transition

**Note 1:** Absolute maximum ratings are those values beyond which damage to the device may occur. The databook specifications should be met, without exception, to ensure that the system design is reliable over its power supply, temperature, and output/input loading variables. National does not recommend operation of FACT® circuits outside databook specifications.

Note 2: All commercial packaging is not recommended for applications requiring greater than 2000 temperature cycles from  $-40^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$ .
