

54F/74F823 9-Bit D-Type Flip-Flop

General Description

The 'F823 is a 9-bit buffered register. It features Clock Enable and Clear which are ideal for parity bus interfacing in high performance microprogramming systems.

The 'F823 is functionally and pin compatible with AMD's Am29823.

Features

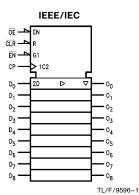

- TRI-STATE® outputs
- Clock Enable and Clear
- Direct replacement for AMD's Am29823

Commercial	Military	Package Number	Package Description

Functional Description

The 'F823 device consists of nine D-type edge-triggered flip-flops. It has TRI-STATE true outputs and is organized in broadside pinning. The buffered Clock (CP) and buffered Output Enable (OE) are common to all flip-flops. The flipflops will store the state of their individual D inputs that meet the setup and hold times requirements on the LOW-to-HIGH CP transition. With the OE LOW the contents of the flipflops are available at the outputs. When the $\overline{\text{OE}}$ is HIGH, the outputs go to the high impedance state. Operation of the OE input does not affect the state of the flip-flops. In addition to the Clock and Output Enable pins, the 'F823 has Clear (CLR) and Clock Enable (EN) pins.

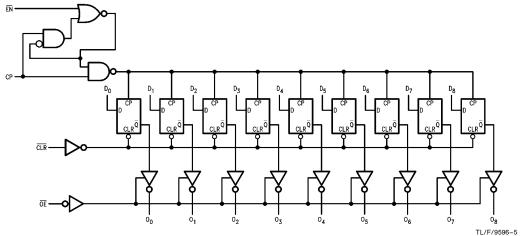

When the $\overline{\text{CLR}}$ is LOW and the $\overline{\text{OE}}$ is LOW, the outputs are LOW. When CLR is HIGH, data can be entered into the flipflops. When $\overline{\mathsf{EN}}$ is LOW, data on the inputs is transferred to the outputs on the LOW to HIGH clock transition. When the EN is HIGH, the outputs do not change state regardless of the data or clock inputs transitions. This device is ideal for parity bus interfacing in high performance systems.
