

PS / 2 Mouse Controller

BU9206

The BU9206 is a PS / 2 mouse communication controller for PCs. This processor shapes waveforms and counts signals from the mouse rotary encoder as the mouse is moved, to provide two-way communication between mouse and PC system.

● Applications

PC mouse

● Features

- 1) For PS / 2 mouse.
- 2) Compatible with a wide range of input signals, because it automatically sets the input threshold levels for the X and Y direction, corresponding to the output level of the rotary encoder inside the mouse.
- 3) CMOS process enables low current consumption.

● Absolute maximum ratings ($T_a = 25^\circ\text{C}$)

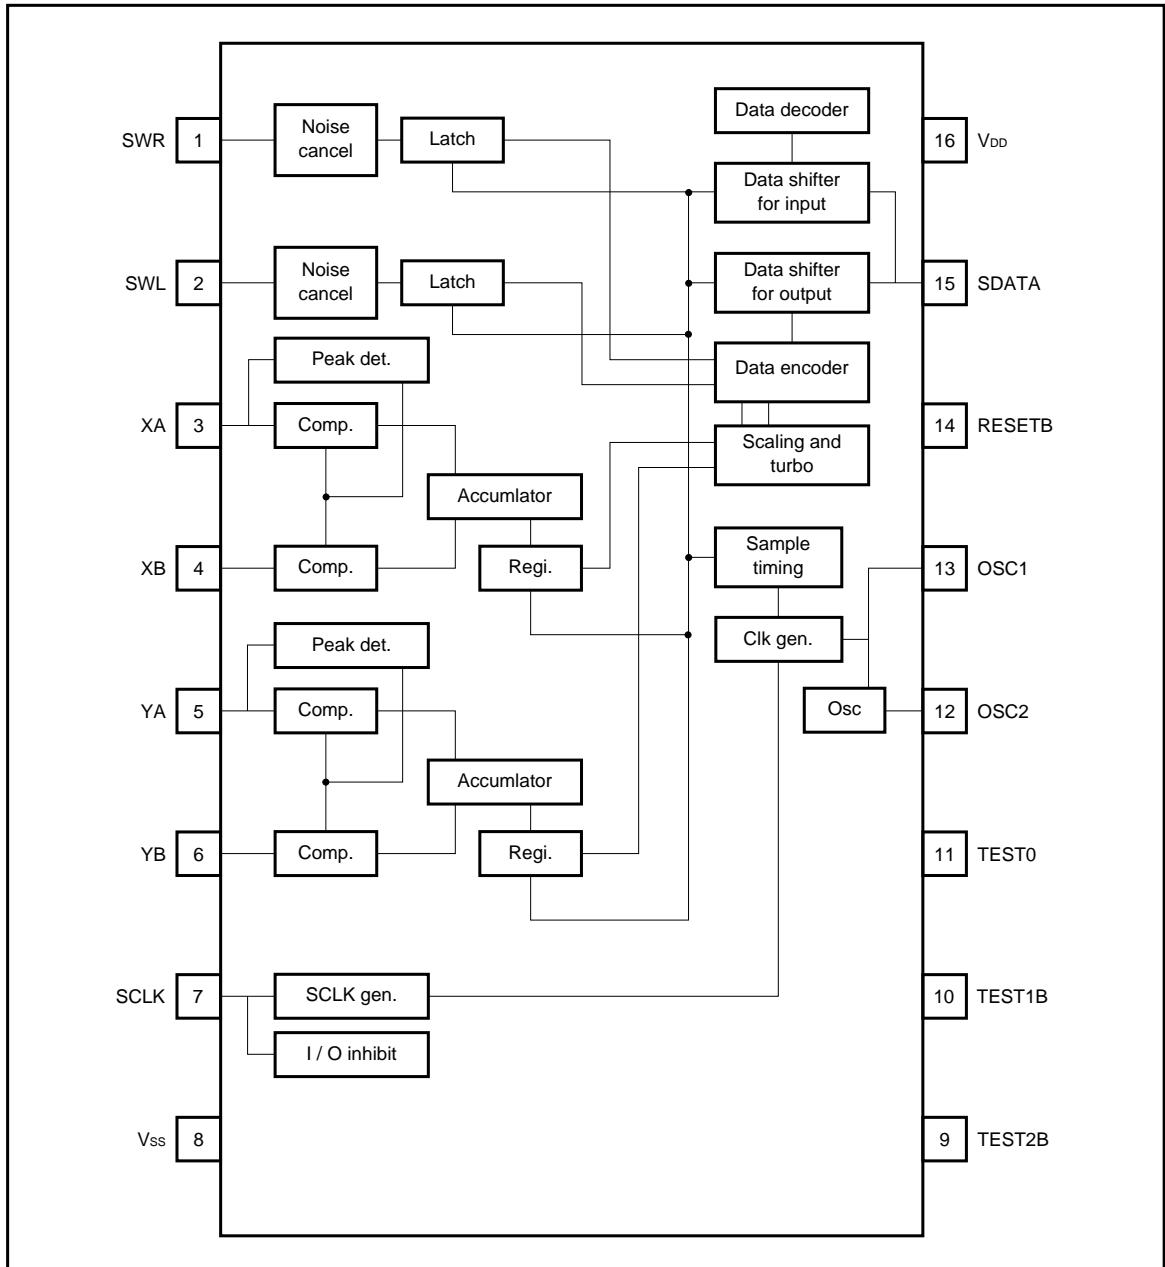

Parameter	Symbol	Limits	Unit
Power supply voltage	V_{DD}	$-0.3 \sim +7.0$	V
Power dissipation	P_d	1000*	mW
Operating temperature	T_{opr}	$-25 \sim +75$	$^\circ\text{C}$
Storage temperature	T_{stg}	$-55 \sim +125$	$^\circ\text{C}$
Input voltage	V_{IN}	$-0.3 \sim V_{DD} + 0.3$	V
Output voltage	V_{OUT}	$-0.3 \sim V_{DD} + 0.3$	V

* Reduced by 10 mW for each increase in T_a of 1°C over 25°C .
