**MM54C906/MM74C906 Hex Open Drain N-Channel Buffers
MM54C907/MM74C907 Hex Open Drain P-Channel Buffers**

MM54C906/MM74C906 Hex Open Drain N-Channel Buffers MM54C907/MM74C907 Hex Open Drain P-Channel Buffers

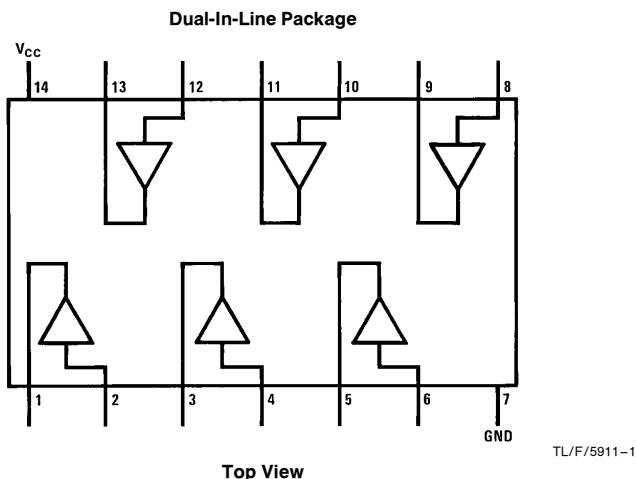

General Description

These buffers employ monolithic CMOS technology in achieving open drain outputs. The MM54C906/MM74C906 consists of six inverters driving six N-channel devices; and the MM54C907/MM74C907 consists of six inverters driving six P-channel devices. The open drain feature of these buffers makes level shifting or wire AND and wire OR functions by just the addition of pull-up or pull-down resistors. All inputs are protected from static discharge by diode clamps to V_{CC} and to ground.

Features

- Wide supply voltage range 3V to 15V
- Guaranteed noise margin 1V
- High noise immunity 0.45 V_{CC} (typ.)
- High current sourcing and sinking open drain outputs

Absolute Maximum Ratings (Note 1)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Voltage at Any Input Pin	$-0.3V$ to $V_{CC} + 0.3V$	Storage Temperature Range	$-65^{\circ}C$ to $+150^{\circ}C$
Voltage at Any Output Pin	$-0.3V$ to $+18V$	Power Dissipation	
MM54C906/MM74C906	$V_{CC} - 18$ to $V_{CC} + 0.3V$	Dual-In-Line	700 mW
MM54C907/MM74C907	$V_{CC} - 18$ to $V_{CC} + 0.3V$	Small Outline	500 mW
Operating Temperature Range		Operating V_{CC} Range	$3V$ to $15V$
MM54C906/MM54C907	$-55^{\circ}C$ to $+125^{\circ}C$	Absolute Maximum V_{CC}	18V
MM74C906/MM74C907	$-40^{\circ}C$ to $+85^{\circ}C$	Lead Temperature (T_L) (Soldering, 10 seconds)	260°C

DC Electrical Characteristics

Min/Max limits apply across temperature range unless otherwise noted

*AC Parameters are guaranteed by DC correlated testing.

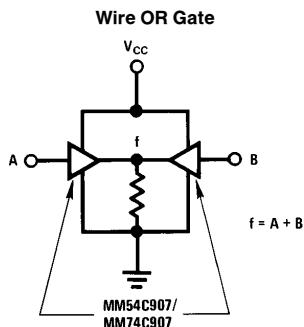

Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. Except for "Operating Temperature Range" they are not meant to imply that the devices should be operated at these limits. The table of "Electrical Characteristics" provides conditions for actual device operation.

Note 2: Capacitance is guaranteed by periodic testing.

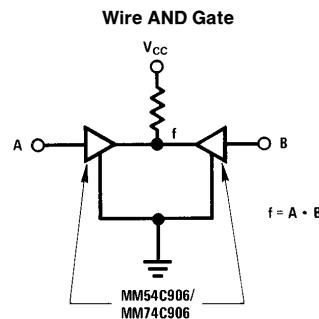

Note 3: C_{PD} determines the no load AC power consumption of any CMOS device. For complete explanation see 54C/74C Family Characteristics Application Note, AN-90. (Assumes outputs are open).

Note 4: "C" used in calculating propagation includes output load capacity (C_L) plus device output capacity (C_{OUT}).

Typical Applications

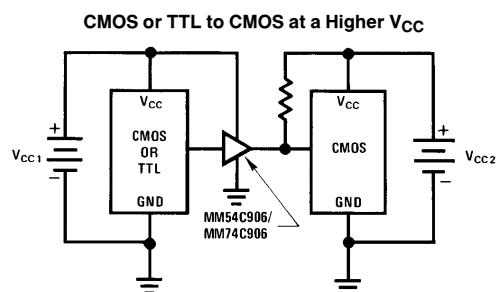

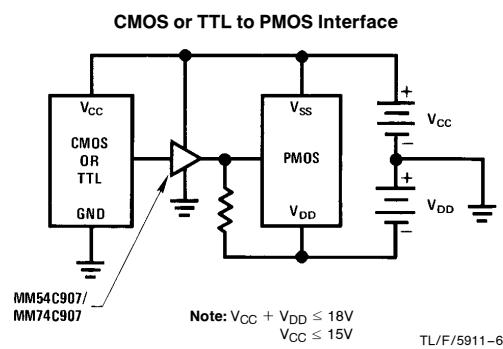

TL/F/5911-4

TL/F/5911-5

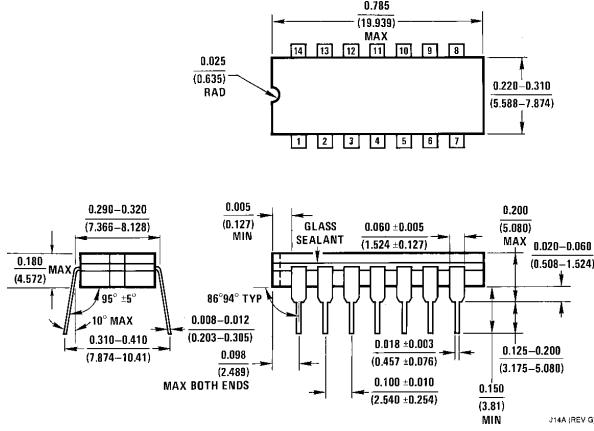

Note: Can be extended to more than 2 inputs.

Note: Can be extended to more than 2 inputs.

LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
