### DESCRIPTION

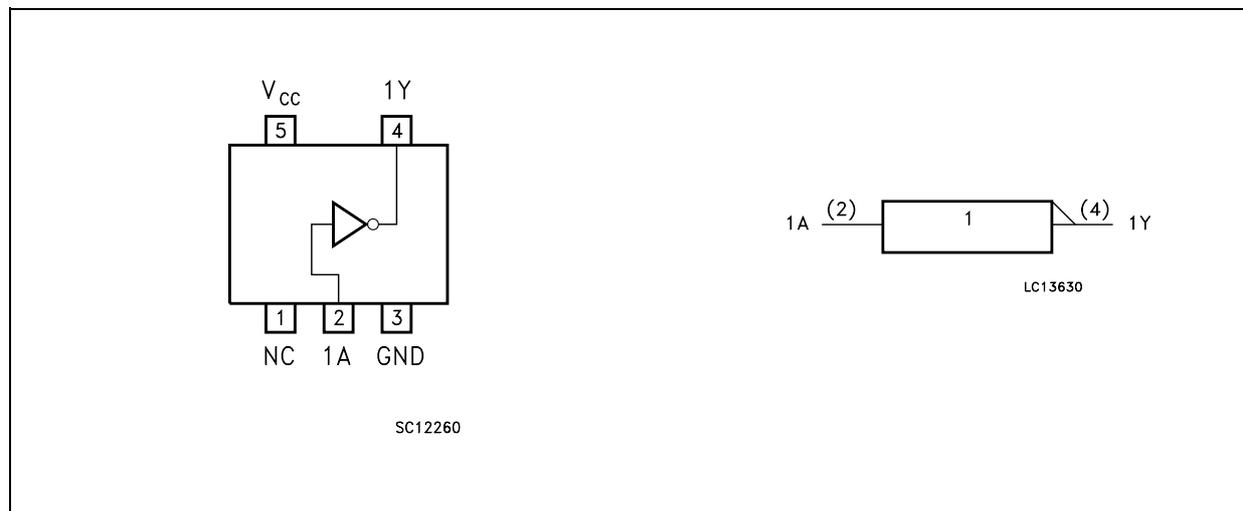

The 74LX1G04 is a low voltage CMOS SINGLE INVERTER fabricated with sub-micron silicon gate and double-layer metal wiring C<sup>2</sup>MOS technology.

It is ideal for 1.65 to 5.5  $V_{CC}$  operations and low power and low noise applications. The internal circuit is composed of 3 stages including buffer output, which provide high noise immunity and stable output. Power down protection is provided on input and output and 0 to 7V can be accepted

on input with no regard to the supply voltage. This device can be used to interface 5V to 3V or lower power supply system. The sub-micron CMOS technology used allow low power consumption and guarantee optimized operation between 2.8V and 1.8V system, as Smart Phone, Digital Still Camera, PDA, Notebook, or each battery powered equipment.

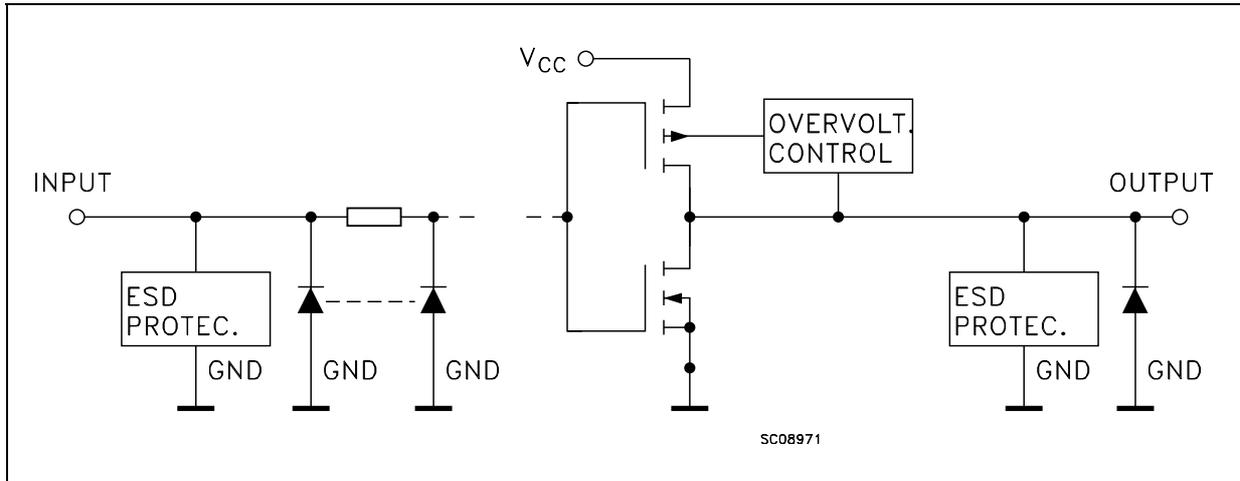

All input and outputs are equipped with protection circuits against ESD discharge.
