DESCRIPTION

The 74VCXH16240 is a low voltage CMOS 16 BIT BUS BUFFER (INVERTED) fabricated with sub-micron silicon gate and five-layer metal wiring C²MOS technology. It is ideal for low power and very high speed 2.3 to 3.6V applications; it can be interfaced to 3.6V signal environment for both inputs and outputs.

Any $n\bar{G}$ output control governs four BUS BUFFERS. Output Enable input ($n\bar{G}$) tied together gives full 16-bit operation.

When $n\bar{G}$ is LOW, the outputs are on. When $n\bar{G}$ is HIGH, the output are in high impedance state. This device is designed to be used with 3 state memory address drivers, etc. Bus hold on data inputs is provided in order to eliminate the need for external pull-up or pull-down resistor.

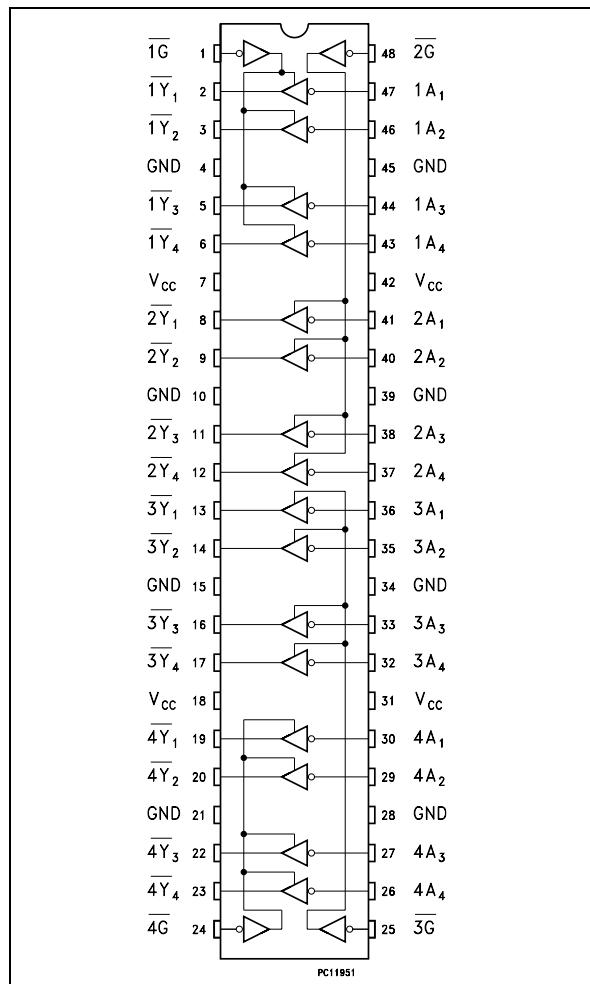

All inputs and outputs are equipped with protection circuits against static discharge, giving them 2KV ESD immunity and transient excess voltage.
