

**BUH50**

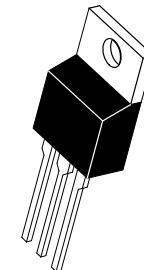

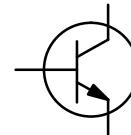

*Designer's™ Data Sheet*  
**SWITCHMODE NPN Silicon**  
**Planar Power Transistor**

The BUH50 has an application specific state-of-art die designed for use in 50 Watts HALOGEN electronic transformers and switchmode applications.

This high voltage/high speed transistor exhibits the following main feature:

- Improved Efficiency Due to Low Base Drive Requirements:
  - High and Flat DC Current Gain  $hFE$
  - Fast Switching
- Motorola "6SIGMA" Philosophy Provides Tight and Reproducible Parametric Distributions
- Specified Dynamic Saturation Data
- Full Characterization at 125°C

**POWER TRANSISTOR**  
4 AMPERES  
800 VOLTS  
50 WATTS

CASE 221A-06  
TO-220AB

#### MAXIMUM RATINGS

Rating	Symbol	Value	Unit
Collector-Emitter Sustaining Voltage	$V_{CEO}$	500	Vdc
Collector-Base Breakdown Voltage	$V_{CBO}$	800	Vdc
Collector-Emitter Breakdown Voltage	$V_{CES}$	800	Vdc
Emitter-Base Voltage	$V_{EBO}$	9	Vdc
Collector Current — Continuous — Peak (1)	$I_C$ $I_{CM}$	4 8	Adc
Base Current — Continuous — Peak (1)	$I_B$ $I_{BM}$	2 4	Adc
*Total Device Dissipation @ $T_C = 25^\circ\text{C}$ *Derate above $25^\circ\text{C}$	$P_D$	50 0.4	Watt $\text{W}/^\circ\text{C}$
Operating and Storage Temperature	$T_J, T_{Stg}$	-65 to 150	°C

#### THERMAL CHARACTERISTICS

Thermal Resistance — Junction to Case — Junction to Ambient	$R_{\theta JC}$ $R_{\theta JA}$	2.5 62.5	°C/W
Maximum Lead Temperature for Soldering Purposes: 1/8" from case for 5 seconds	$T_L$	260	°C

(1) Pulse Test: Pulse Width = 5 ms, Duty Cycle  $\leq 10\%$ .

Designer's and SWITCHMODE are trademarks of Motorola, Inc.

**Designer's Data for "Worst Case" Conditions** — The Designer's Data Sheet permits the design of most circuits entirely from the information presented. SOA Limit curves — representing boundaries on device characteristics — are given to facilitate "worst case" design.

ELECTRICAL CHARACTERISTICS ( $T_C = 25^\circ\text{C}$  unless otherwise noted)

Characteristic	Symbol	Min	Typ	Max	Unit

## TYPICAL CHARACTERISTICS

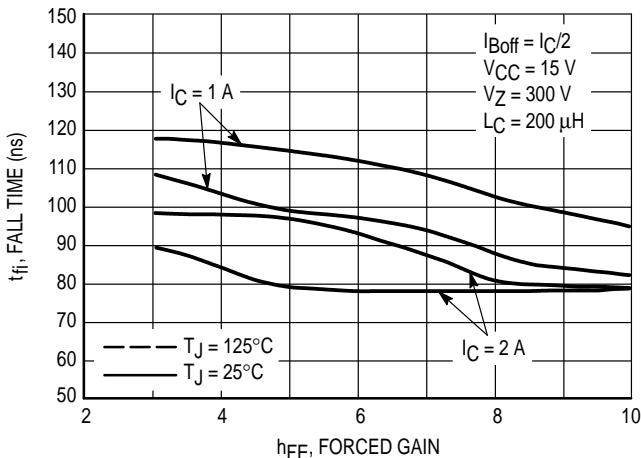

Figure 15. Inductive Fall Time

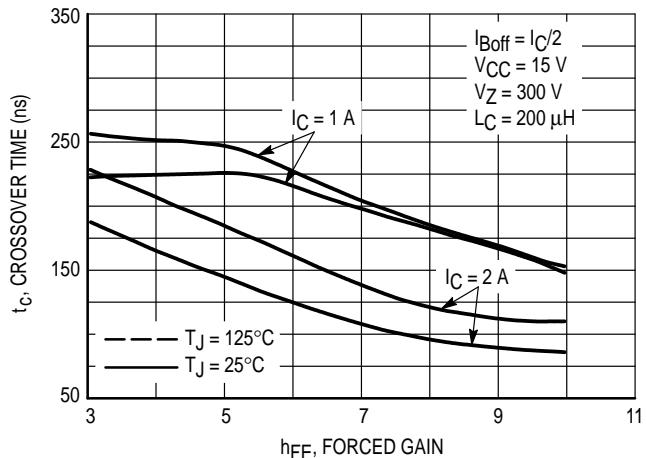

Figure 16. Inductive Crossover Time

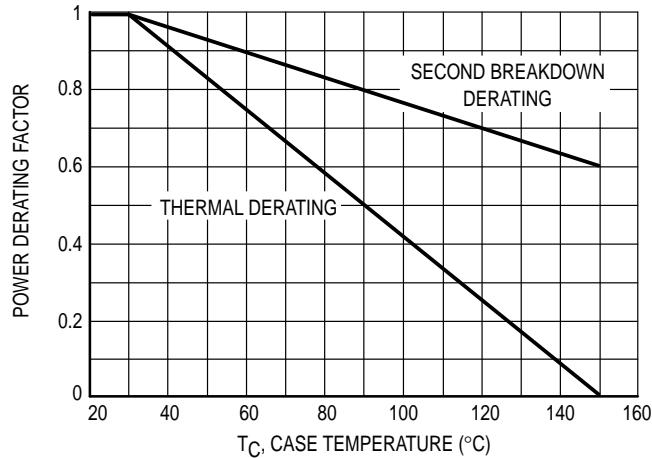

Figure 17. Forward Power Derating

There are two limitations on the power handling ability of a transistor: average junction temperature and second breakdown. Safe operating area curves indicate  $I_C$ - $V_{CE}$  limits of the transistor that must be observed for reliable operation; i.e., the transistor must not be subjected to greater dissipation than the curves indicate. The data of Figure 20 is based on  $T_C = 25^\circ\text{C}$ ;  $T_J(\text{pk})$  is variable depending on power level. Second breakdown pulse limits are valid for duty cycles to 10% but must be derated when  $T_C > 25^\circ\text{C}$ . Second breakdown limitations do not derate the same as thermal limitations. Allowable current at the voltages shown on Figure 20 may be found at any case temperature by using the appropriate curve on Figure 17.

$T_J(\text{pk})$  may be calculated from the data in Figure 22. At any case temperatures, thermal limitations will reduce the power that can be handled to values less than the limitations imposed by second breakdown. For inductive loads, high voltage and current must be sustained simultaneously during turn-off with the base to emitter junction reverse biased. The safe level is specified as a reverse biased safe operating area (Figure 21). This rating is verified under clamped conditions so that the device is never subjected to an avalanche mode.
