

1-MOTOR DRIVER FOR VTR

The DBL2084 is a monolithic integrated circuit designed to perform bi-directional DC Motor driving, braking and speed control for VCRs. Speed of the motor can be controlled by adjusting the external voltage of the motor speed control pin.

FEATURES

- Stable braking characteristics by built-in braking function.
- Stable driving direction change.
- Built-in element to absorb dash current derived from changing motor direction and braking motor driving.
- CMOS logic level compatible input level.
- Built-in external motor speed control pin.

APPLICATION

- VTR
- CDP
