Monolithic Digital IC

LB1645N

Bidirectional Motor Driver

The LB1645N is a bidirectional motor driver IC. Since it has a 2-input logic circuit and performs the functions of bidirectional driving and braking, it is capable of direct driving 6V, 9V, 12V motors. The output voltage can be varied by using an external Zener diode.

Features

- 2-input logic can be used to exercise control of bidirectional driving and braking.
- On-chip elements to absorb dash current of motor
- Input connectable direct to MOS LSI
- Output voltage variable by use of external Zener diode
