

FEATURES

- Offset Voltage 50 μ V Max
- Offset Voltage Drift 1 μ V/ $^{\circ}$ C Max
- Bias Current 250pA Max
- Offset Current 250pA Max
- Bias and Offset Current Drift 4pA/ $^{\circ}$ C Max
- Supply Current 560 μ A Max
- 0.1Hz to 10Hz Noise 0.5 μ Vp-p, 2.2pAp-p
- CMRR 115dB Min
- Voltage Gain 117dB Min
- PSRR 114dB Min
- Guaranteed Operation on Two NiCad Batteries

APPLICATIONS

- Replaces OP-07/OP-77/OP-97/OP-177/AD707/LT1001 with Improved Price/Performance
- High Impedance Difference Amplifiers
- Logarithmic Amplifiers (Wide Dynamic Range)
- Thermocouple Amplifiers
- Precision Instrumentation
- Active Filters (with Small Capacitors)

DESCRIPTION

LT®1097 achieves a new standard in combining low price and outstanding precision performance.

On all operational amplifier data sheets, the specifications listed on the front page are for highly selected, expensive grades, while the specs for the low cost grades are buried deep in the data sheet.

The LT1097 does not have any selected grades, the outstanding specifications shown in the Features section are for its only grade.

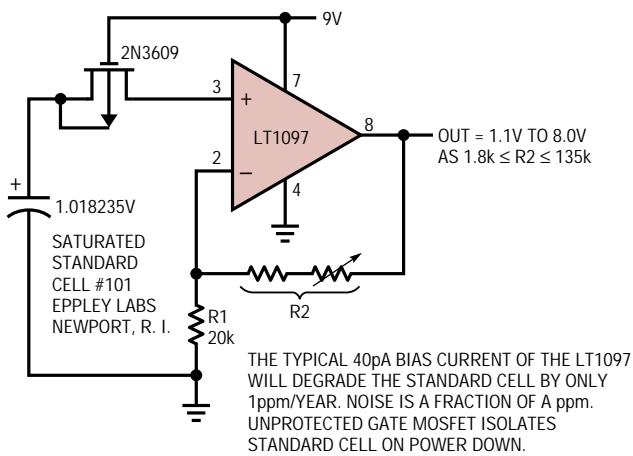

The design effort of the LT1097 concentrated on optimizing the performance of all precision specs—at only 350 μ A of supply current. Typical values are 10 μ V offset voltage, 40pA bias and offset currents, 0.2 μ V/ $^{\circ}$ C and 0.4pA/ $^{\circ}$ C drift. Common mode and power supply rejections, voltage gain are typically in excess of 128dB.

All parameters that are important for precision, low power op amps have been optimized. Consequently, using the LT1097 error budget calculations in most applications is unnecessary.

 LT and LTC are registered trademarks of Linear Technology Corporation.

TYPICAL APPLICATION

Saturated Standard Cell Amplifier

Input Offset Voltage Distribution

LT1097 • G01

ABSOLUTE MAXIMUM RATINGS

Supply Voltage $\pm 20V$
 Differential Input Current (Note 1) $\pm 10mA$
 Input Voltage $\pm 20V$
 Output Short Circuit Duration Indefinite

Operating Temperature Range $-40^\circ C$ to $85^\circ C$
 Storage Temperature Range $-65^\circ C$ to $150^\circ C$
 Lead Temperature (Soldering, 10 sec) $300^\circ C$

The ● denotes specifications which apply over the full operating temperature range.

Note 1: Differential input voltages greater than 1V will cause excessive current to flow through the input protection diodes unless limiting resistance is used.

Note 2: This parameter is guaranteed by design and is not tested.

Note 3: Power supply rejection ratio is measured at the minimum supply voltage.

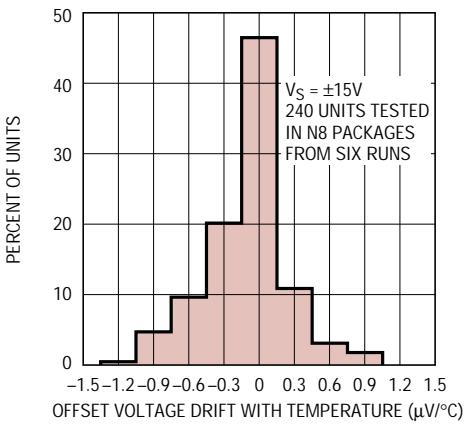

Note 4: This parameter is not 100% tested.

Note 5: The LT1097 is designed, characterized and expected to meet these extended temperature limits, but is not tested at $-40^\circ C$ and $85^\circ C$.

Guaranteed I grade parts are available; consult factory.

SCHEMATIC DIAGRAM

APPLICATIONS INFORMATION

The LT1097 is pin compatible to and directly replaces such precision op amps as the OP-07, OP-77, AD707, OP-97, OP-177, LM607 and LT1001 with improved price/performance. Compatibility includes externally nulling the offset voltage, as all of the above devices are trimmed with a potentiometer between Pin 1 and Pin 8 and the wiper tied to V⁺.

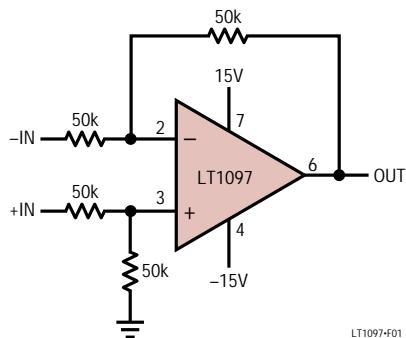

The simple difference amplifier can be used to illustrate the all-around excellence of the LT1097. The 50k input resistance is selected to be large enough compared to input signal source resistance. Simultaneously, the 50k resistors should not dominate the precision and noise error budget. Assuming perfect matching between the four resistors, the following table summarizes the input

referred performance obtained using the LT1097 and other popular, low cost precision op amps.

Input offset voltage can be adjusted over a $\pm 600\mu\text{V}$ range with a 10k potentiometer.

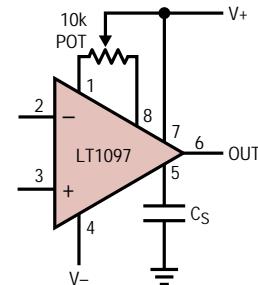

The LT1097 is internally compensated for unity gain stability. As shown on the Capacitive Load Handling plot, the LT1097 is stable with any capacitive load. However, the overcompensation capacitor, C_S, can be used to reduce overshoot with heavy capacitive loads, to narrow noise bandwidth or to stabilize circuits with gain in the feedback loop.

APPLICATIONS INFORMATION

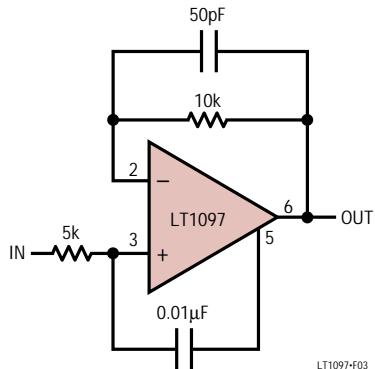

The availability of the compensation terminal permits the use of feedforward frequency compensation to enhance slew rate. The voltage follower feedforward scheme bypasses the amplifier's gain stages and slews at nearly $10V/\mu s$.

The inputs of the LT1097 are protected with back-to-back diodes. In the voltage follower configuration, when the input is driven by a fast, large signal pulse ($>1V$), the input

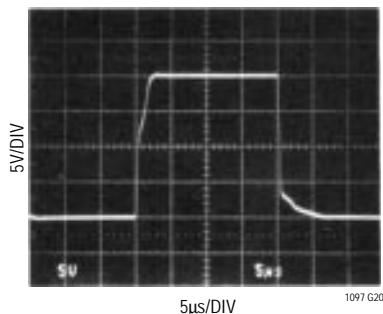

protection diodes effectively short the output to the input during slewing, and a current, limited only by the output short circuit protection will flow through the diodes.

The use of a feedback resistor, as shown in the voltage follower feedforward diagram, is recommended because this resistor keeps the current below the short circuit limit, resulting in faster recovery and settling of the output.

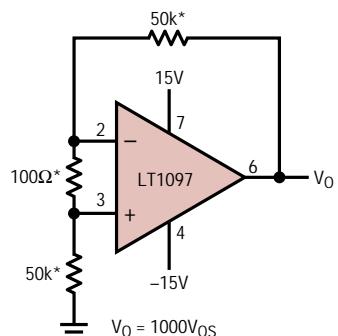

Follower Feedforward Compensation

Pulse Response of Feedforward Compensation

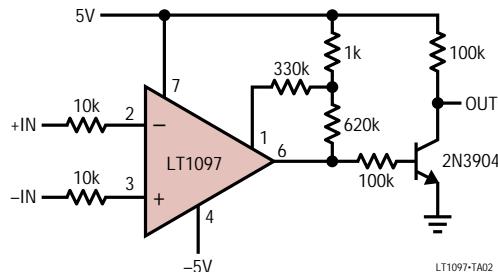

Test Circuit for Offset Voltage and its Drift with Temperature

TYPICAL APPLICATION

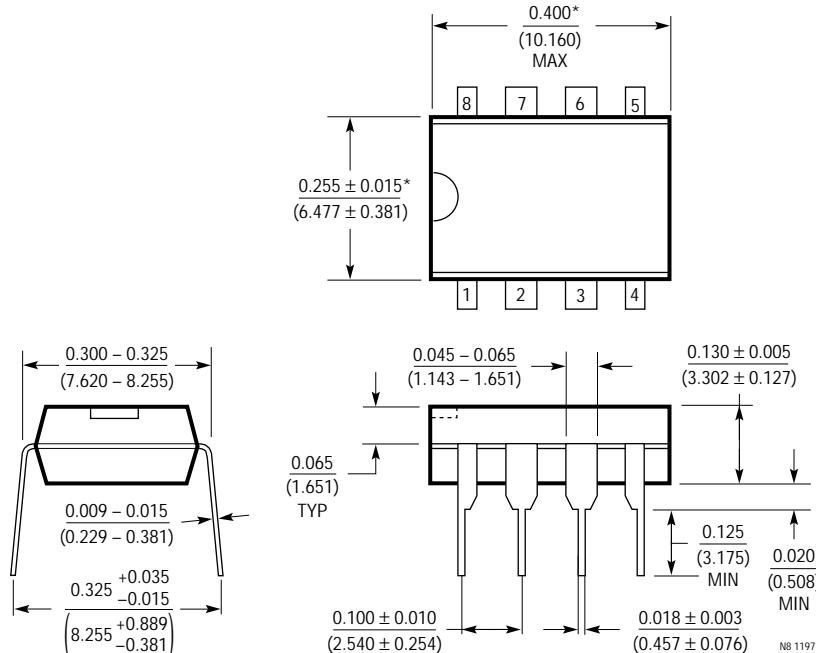

Low Power Comparator with $<10\mu V$ Hysteresis

PACKAGE DESCRIPTION

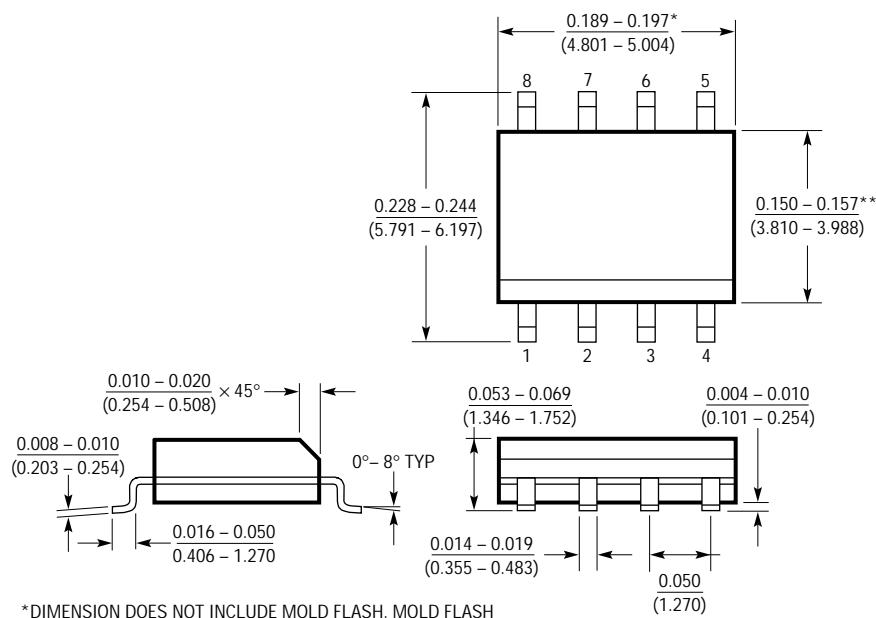

Dimensions in inches (millimeters) unless otherwise noted.

N8 Package
8-Lead PDIP (Narrow 0.300)
(LTC DWG # 05-08-1510)

*THESE DIMENSIONS DO NOT INCLUDE MOLD FLASH OR PROTRUSIONS.
MOLD FLASH OR PROTRUSIONS SHALL NOT EXCEED 0.010 INCH (0.254mm)

S8 Package
8-Lead Plastic Small Outline (Narrow 0.150)
(LTC DWG # 05-08-1610)

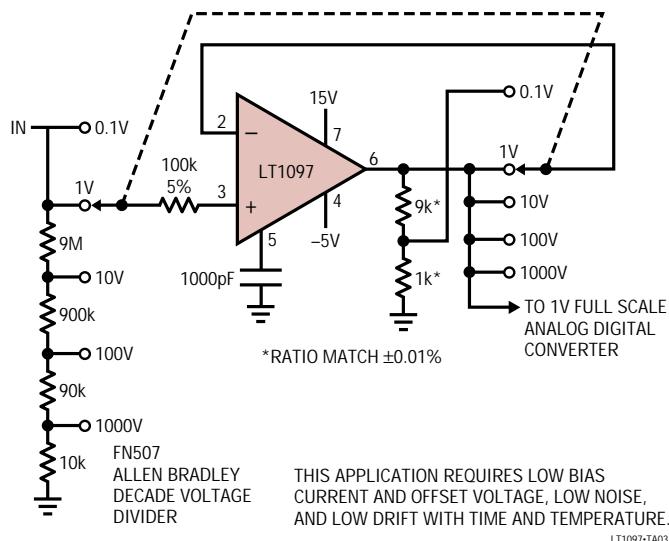

*DIMENSION DOES NOT INCLUDE MOLD FLASH. MOLD FLASH
SHALL NOT EXCEED 0.006" (0.152mm) PER SIDE

**DIMENSION DOES NOT INCLUDE INTERLEAD FLASH. INTERLEAD
FLASH SHALL NOT EXCEED 0.010" (0.254mm) PER SIDE

S08 099%

TYPICAL APPLICATION

Input Amplifier for 4 1/2 Digit Voltmeter

THIS APPLICATION REQUIRES LOW BIAS
CURRENT AND OFFSET VOLTAGE, LOW NOISE,
AND LOW DRIFT WITH TIME AND TEMPERATURE.
