DESCRIPTION

The M74HC4352 is an high speed CMOS ANALOG MULTIPLEXER/DEMULTIPLEXER fabricated with silicon gate C²MOS technology. A built-in level shifting is included to allow an input range up to $\pm 6V$ (peak) for an analog signal with digital control signal of 0 to 6V.

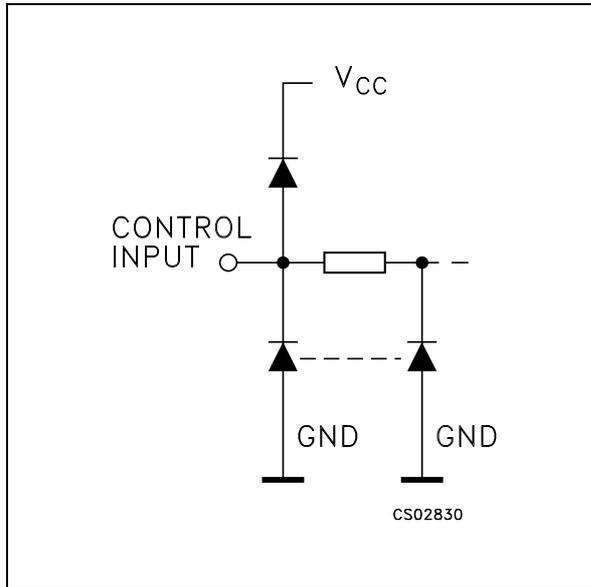

V_{EE} supply pin is provided for analog input signals. It has two enable inputs to enable all the switches when high (EN2) or low (EN1). For operation as a digital multiplexer/demultiplexer, V_{EE} is connected to GND.

The M74HC4352 has a pair of four channel multiplexer/demultiplexer having two control inputs A and B that select one of four channel of the two sections.
