

MAX3680 Evaluation Kit

Evaluates: MAX3680

General Description

The MAX3680 evaluation kit (EV kit) simplifies evaluation of the MAX3680 622Mbps, SDH/SONET 1:8 deserializer. The EV kit requires only a +3.3V supply, and includes all the external components necessary to interface with 3.3V PECL/TTL logic. The board can be connected directly to the output of a clock-and-data-recovery circuit (such as the MAX3675) and to the TTL input of an overhead termination circuit. It can also be used with a signal generator and an oscilloscope to evaluate the MAX3680's basic functionality.

Component List

DESIGNATION	QTY	DESCRIPTION
C1-C4	4	0.1µF ceramic capacitors
C5	1	33µF, 10V tantalum capacitor AVX TAJC336K010 or Sprague 293D336X0010C2
C6	1	2.2µF tantalum capacitor AVX TAJA225K010 or Sprague 293D225X0010A2
C7-C12	6	100pF ceramic capacitors
J3-J16	14	SMA connectors (PC edge mount)
L1	1	56nH inductor Coilcraft 0805CS-560-XKBC
R1, R3, R5, R7	4	82Ω, 5% resistors
R2, R4, R6, R8	4	130Ω, 5% resistors
R9-R17	9	2.4kΩ, 5% resistors
+3.3V, GND JR9-JR17	11	2-pin headers
U1	1	MAX3680EAI
None	1	MAX3680 data sheet

Component Suppliers

SUPPLIER	PHONE	FAX
AVX	(803) 946-0690	(803) 626-3123
Coilcraft	(847) 639-6400	(847) 639-1469
Sprague	(603) 224-1961	(603) 224-1430

Please indicate that you are using the MAX3680 when contacting the above component suppliers.

Features

- ◆ Single +3.3V Supply
- ◆ Inputs Terminated for Interfacing with 3.3V PECL
- ◆ Outputs Configured for 50Ω or High-Impedance Interface
- ◆ Fully Assembled and Tested

Ordering Information

PART	TEMP. RANGE	BOARD TYPE
MAX3680EVKIT-SO	-40°C to +85°C	Surface Mount

Detailed Description

The MAX3680 EV kit simplifies evaluation of the MAX3680 622Mbps, SDH/SONET 1:8 deserializer. The EV kit operates from a single +3.3V supply and includes all the external components necessary to interface with 3.3V PECL/TTL logic.

Each PECL input (SCLK+, SCLK-, SD+, SD-) is terminated on the EV board with the Thevenin equivalent of 50Ω to (Vcc - 2V). These inputs can be driven directly by any 3.3V PECL device's output, such as a clock-and-data-recovery circuit (e.g., the MAX3675). The synchronization input (SYNC) is a TTL input.

The TTL outputs (PCLK, PD_) can interface to either 50Ω or high-impedance inputs. To interface to 50Ω inputs, connect the inputs directly to the SMA connectors labeled PCLK and PD0-PD7. This configuration forms a 50-to-1 voltage divider that maintains a high-impedance load to each TTL output while interfacing to 50Ω. To interface to high-impedance inputs, connect the inputs to the 2-pin headers at R9-R17, which provide direct connections to the TTL outputs.

Layout Considerations

To minimize propagation-delay skew, all PECL input signal lines are 50Ω transmission lines of equal length. To allow accurate characterization of the parallel-clock to data-output delay, the output data lines (prior to the series 2.4kΩ termination resistors) are matched and kept as short as possible. Excluding the series termination resistor, each output data line measures approximately 3pF at the 2-pin header (JR9-JR17).
