Recommended Operating Conditions

Ambient Operating Range (T_A) -55°C to +125°C
Supply Voltage Range -15V to +15V

NOTE 1: Output voltages beyond -5V or bootstrapped operation reduce the allowable supply voltage. See maximum input/output differential specifications.

Stresses beyond those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

NOTE 2: Output voltage tests are performed using an external resistor divider to set the output voltage to -5V, R₃=15kΩ, R₄=3.69kΩ. See Figure 2.

NOTE 3: Output voltage tolerance is ±4.5% plus external feedback resistor tolerances.

NOTE 2: The standby supply-current specification is set at 100μA due to test method limitations rather than actual device performance. The two-sigma distribution of standby supply current is less than 10μA (over temperature).
