External Components

1.) Input coupling capacitor(C1)

The recommended value is $10\mu\text{F}$. If smaller values than $10\mu\text{F}$ are used, low frequency separation will worsen, and if larger values are used, POP noise occurs strongly.

2.) Low Pass Filter (C2,C1,R1)

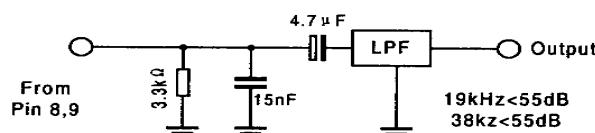

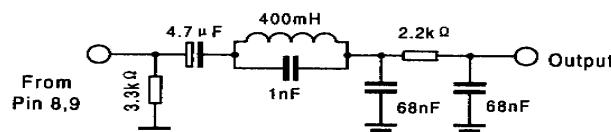

This is the low pass filter for the PLL, which determines the capture range and THD at low frequency.

3.) VCO network (C4,R2,R7)

The VCO free running frequency is adjusted by connecting a frequency counter to monitor the 38kHz output of Pin 6.

4.) Decoder output (Pin8,9)

These components provide Right and Left channel output load circuits. The recommended circuits are as follows:
