

TDE1767, A TDE1787, A

INTERFACE CIRCUIT (RELAY AND LAMP-DRIVER)

- OPEN GROUND PROTECTION
- HIGH OUTPUT CURRENT
- ADJUSTABLE SHORT-CIRCUIT PROTECTION
- INTERNAL THERMAL PROTECTION WITH EXTERNAL RESET
- LARGE SUPPLY VOLTAGE RANGE
- ALARM OUTPUT
- INPUT VOLTAGE CAN BE HIGHER THAN V_{CC}
- OUTPUT VOLTAGE CAN BE LOWER THAN GROUND ($V_{CC} - V_O \leq V_{CC[\max]}$)

DESCRIPTION

The TDE1767, A / TDE1787, A are a monolithic amplifiers designed for high current and high voltage applications, specifically to drive lamps, relays, stepping motors.

The devices are essentially blow-out proof. The output is protected from short-circuits with the positive supply or drive. In addition thermal shut down is provided to keep the IC from overheating.

If internal dissipation becomes too high, the driver will shut down to prevent excessive heating. The output stays null after the overheating is off, if the reset input is low. If high the output will alternatively switch-on and off until the overload is removed.

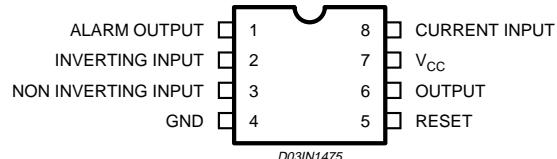

The device operates over a wide range voltages from standard 15V operational amplifier supplies to the single +6V or +48V used for industrial electric systems. Input voltages can be higher than the V_{CC} .

An alarm output suitable for driving a LED is pro-

vited. This LED, normally on (if referred to ground), will die out or flash during an overload depending on the state of the reset input.

The output is low in open ground conditions.

V _{O(sat)}	Output Saturation Voltage	Output High V _I ⁺ - V _I ⁻ ≥ 50mV; R _{SC} = 0; V _{CC} = 30V TDE1787A, TDE1767A: T _j = 25°C TDE1787, TDE1767: T _j = 25°C TDE1787A, TDE1767A: T _j = 150°C TDE1787, TDE1767: T _j = 150°C		1 1 1.1 1.1	1.1 1.2 1.2 1.3	V V V V
I _{OL}	Output Leakage Current	Output Low			100	μA

TDE1767, A TDE1787, A

Symbol	Parameter	Test Condition	Min.	Typ.	Max.	Unit
I_A	Available Alarm Output Current	Output Source Current $V_{AH} = V_{CC}-2.5V$	-4	-5		mA
		Output Sink Current (in thermal shut-down) $V_A = 1.4V$	5	10		mA
I_{reset}	Reset Input Current			2	40	μA
$V_{th-reset}$	Reset Threshold			1.4		A
	Output Leakage Current	open ground		10		μA

Note: 1. The offset voltage given is the maximum value of different input voltage required to drive the output voltage within 2 V of the ground or the supply voltage.
 2. Input voltage range is independent of the supply voltage.
