### DESCRIPTION

The TS393 is a micropower CMOS dual voltage comparator with extremely low consumption of 9 $\mu$ A typ / comparator (20 times less than bipolar LM393). Similar performances are offered by the dual micropower comparator TS3702 with a push-pull CMOS output.

Thus response times remain similar to the LM393.

$T_{stg}$	Storage Temperature Range	-65 to +150	°C

- All voltage values, except differential voltage, are with respect to network ground terminal.
- Differential voltages are the non-inverting input terminal with respect to the inverting input terminal.
- Excursions of input voltages may exceed the power supply level. As long as the common mode voltage [ $V_{icm} = (V_{in}^+ + V_{in}^-)/2$ ] remains within the specified range, the comparator will provide a stable output state. However, the maximum current through the ESD diodes (if) of the input stage must strictly be observed. The output must never exceed the power supply voltage.
- Guaranteed by design.
- $P_d$  is calculated with  $T_{amb} = +25^\circ\text{C}$ ,  $T_j = +150^\circ\text{C}$  and  $R_{thja} = 100^\circ\text{C}/\text{W}$  for DIP8 package  
 $= 175^\circ\text{C}/\text{W}$  for SO8 package  
 $= 200^\circ\text{C}/\text{W}$  for TSSOP8 package
