MPPS™ Miniature Package Power Solutions DUAL 20V PNP LOW SATURATION SWITCHING TRANSISTOR

SUMMARY

$V_{CEO} = -20V$; $R_{SAT} = 64m\Omega$; $I_C = -3.5A$

DESCRIPTION

Packaged in the innovative 3mm x 2mm MLP (Micro Leaded Package) outline, these new 4th generation low saturation dual transistors offer extremely low on state losses making them ideal for use in DC-DC circuits and various driving and power management functions.

Additionally users gain several other **key benefits**:

Performance capability equivalent to much larger packages

Improved circuit efficiency & power levels

PCB area and device placement savings

Lower package height (nom 0.9mm)

Reduced component count

3mm x 2mm (Dual die) MLP

FEATURES

- Low Equivalent On Resistance
- Extremely Low Saturation Voltage (-220mV @ -1A)
- h_{FE} characterised up to -6A
- $I_C = -3.5A$ Continuous Collector Current
- 3mm x 2mm MLP

APPLICATIONS

- DC - DC Converters (FET Drivers)
- Charging circuits
- Power switches
- Motor control
- LED Backlighting circuits

Notes

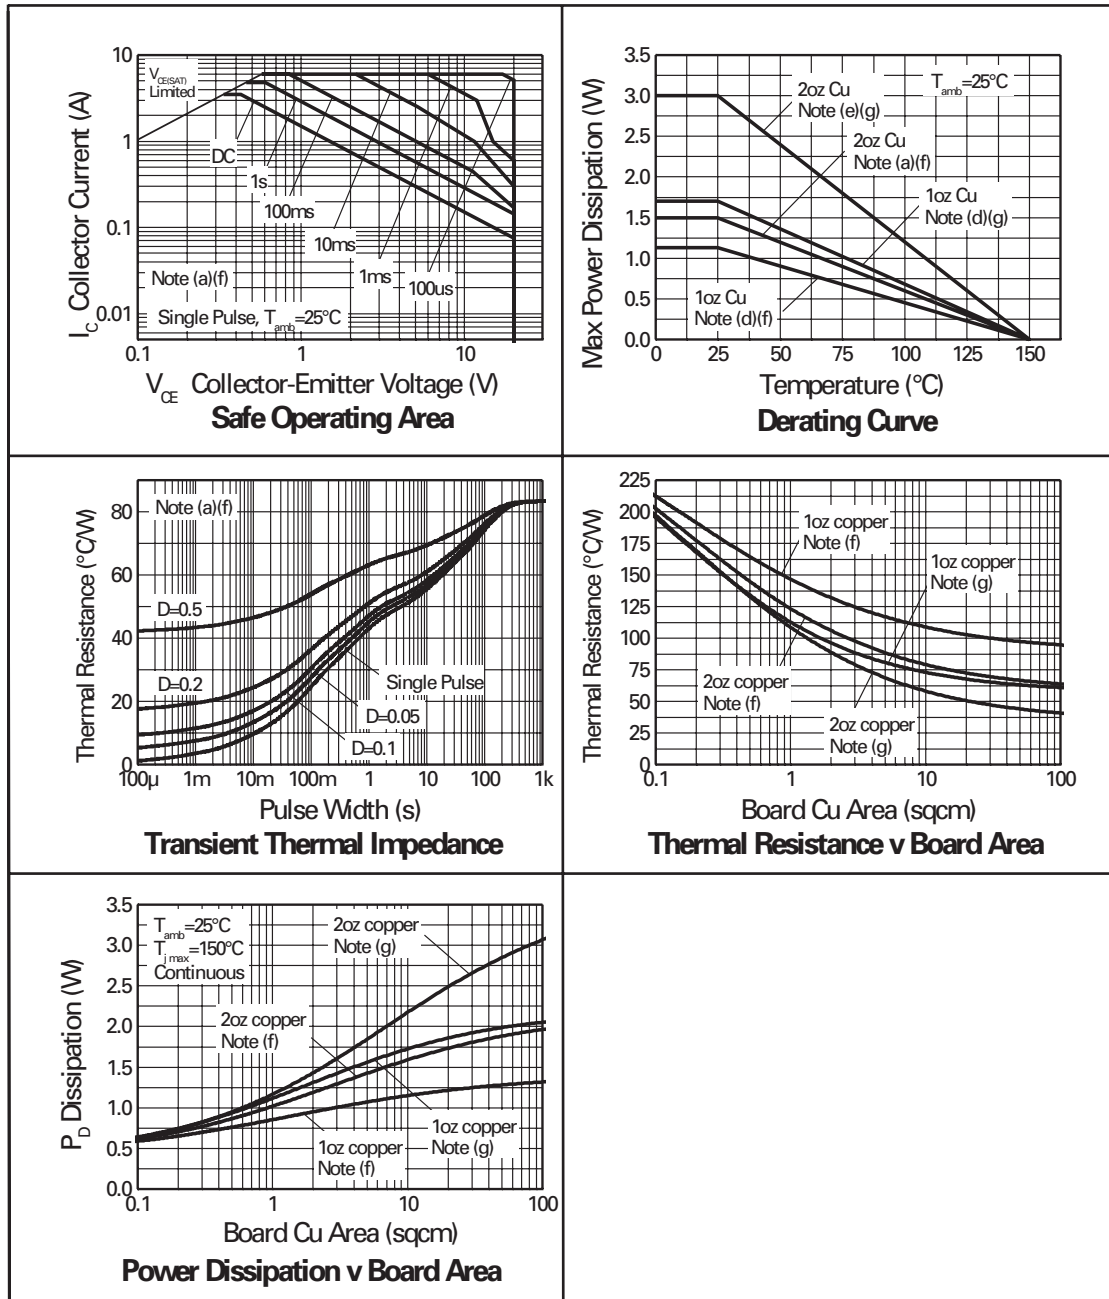

- (a) For a dual device surface mounted on 8 sq cm single sided 2oz copper on FR4 PCB, in still air conditions **with all exposed pads attached**. The copper area is split down the centre line into two separate areas with one half connected to each half of the dual device.
- (b) Measured at $t < 5$ secs for a dual device surface mounted on 8 sq cm single sided 2oz copper on FR4 PCB, in still air conditions **with all exposed pads attached**. The copper area is split down the centre line into two separate areas with one half connected to each half of the dual device.
- (c) For a dual device surface mounted on 8 sq cm single sided 2oz copper on FR4 PCB, in still air conditions **with minimal lead connections only**.
- (d) For a dual device surface mounted on 10 sq cm single sided 1oz copper on FR4 PCB, in still air conditions **with all exposed pads attached**. The copper area is split down the centre line into two separate areas with one half connected to each half of the dual device.
- (e) For a dual device surface mounted on 85 sq cm single sided 2oz copper on FR4 PCB, in still air conditions **with all exposed pads attached**. The copper area is split down the centre line into two separate areas with one half connected to each half of the dual device.
- (f) For a dual device with one active die.
- (g) For dual device with 2 active die running at equal power.
- (h) Repetitive rating - pulse width limited by max junction temperature. Refer to Transient Thermal Impedance graph.
- (i) The minimum copper dimensions required for mounting are no smaller than the exposed metal pads on the base of the device as shown in the package dimensions data. The thermal resistance for a dual device mounted on 1.5mm thick FR4 board using minimum copper 1 oz weight, 1mm wide tracks and one half of the device active is $R_{\theta h} = 250^{\circ}\text{C/W}$ giving a power rating of $P_{tot} = 500\text{mW}$.
