## Correlated Double Sampling IC

### ■ Overview

The AN2018S is used to reduce noise in CCD image sensor output signal. It performs correlated double-sampling on image signal sent from a CCD sensor to output clearer image signal.

### ■ Features

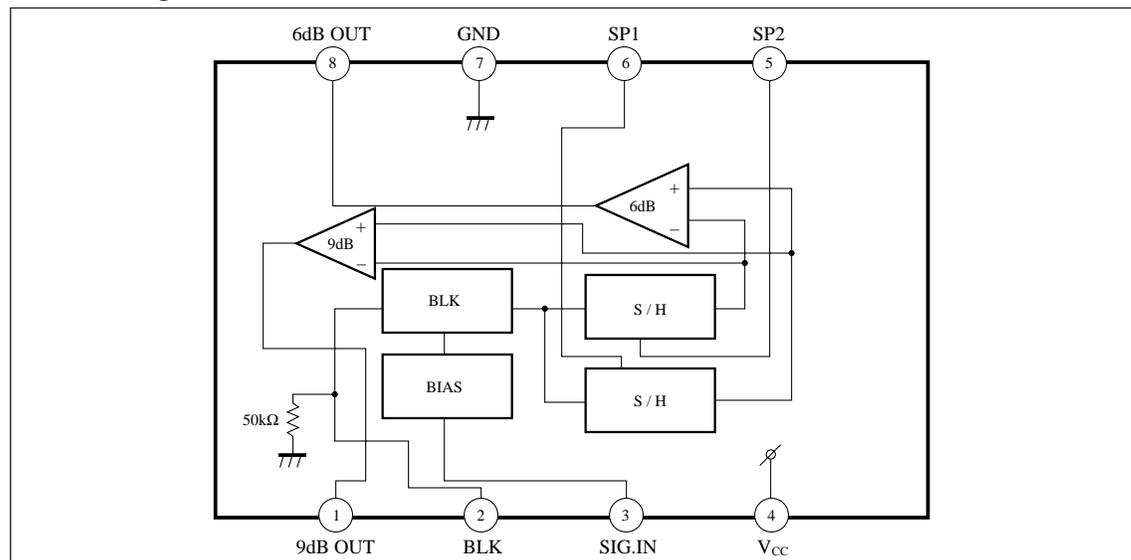

- Operating on low voltage ( $V_{CC}=4.8V$ ), consuming little current ( $I_{CC}=12.7mA$  typ.)
- Including a high-speed sampling circuit responding to 510-830H CCD
- 6dB or 9dB fixed gain
- 83-dB high S/N-ratio (at 6dB output)
