

AN5285K

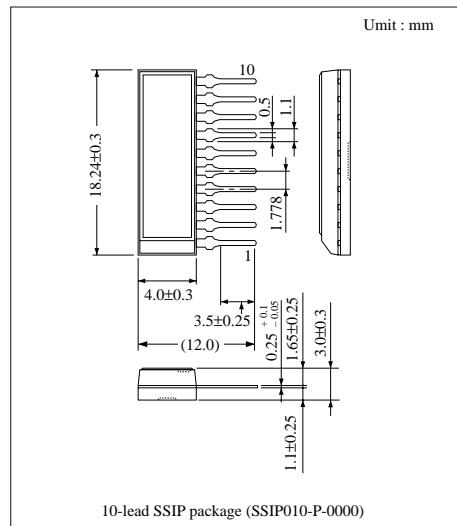

Sound Level Automatic Gain Control Circuit

■ Overview

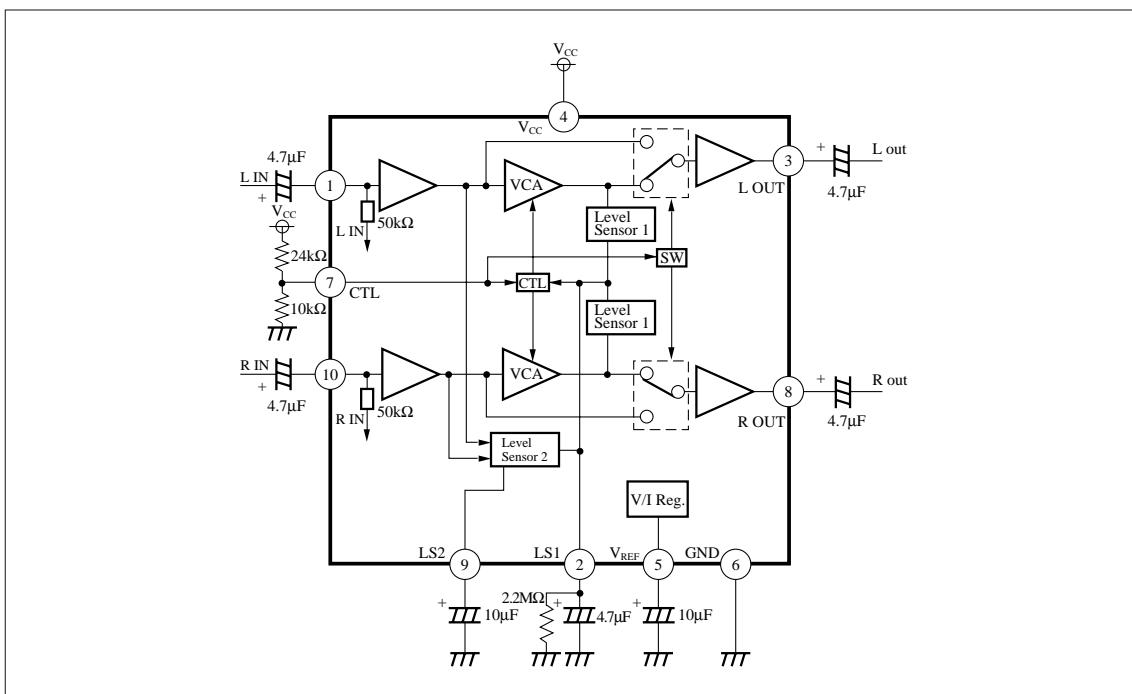

The AN5285K is an IC for automatic volume adjustment for TV/VTR stereo which reduces the dynamic amplitude change of sound signal by using a certain type of AGC circuit with an appropriate time constant, in order to reduce the volume difference between programs or between CATV stations.

■ Features

- AGC function of sound level by VCA gain control
- Prevention of S/N deterioration by reduction of VCA gain at no sound (typ. 20mV or less)
- AGC function ON/OFF from outside possible
- Operation point for VCA gain decrease controllable by an external resistance
- Stereo sound supported by two VCAs
