

# AN78L00/AN78L00M Series

3-pin Positive Output Voltage Regulator (100mA Type)

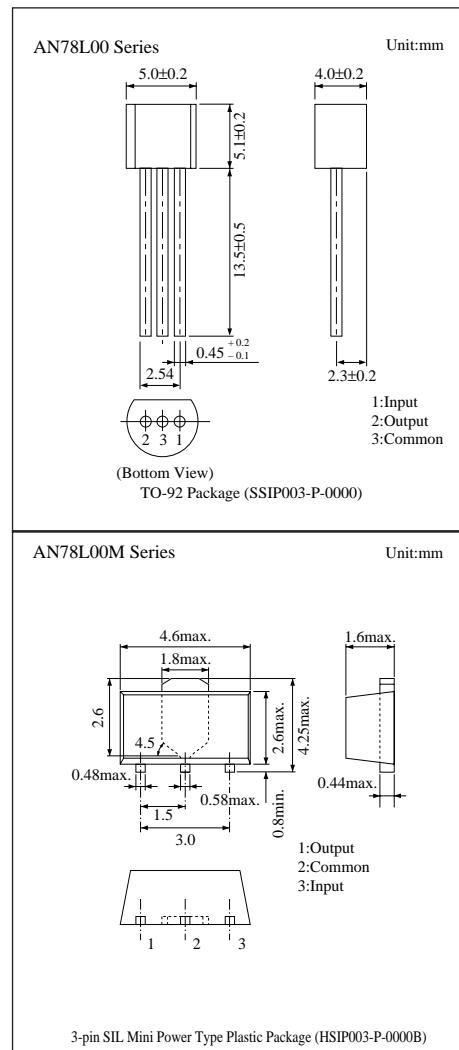

## ■ Overview

The AN78L00 series is 3-pin fixed positive output type monolithic voltage regulators.

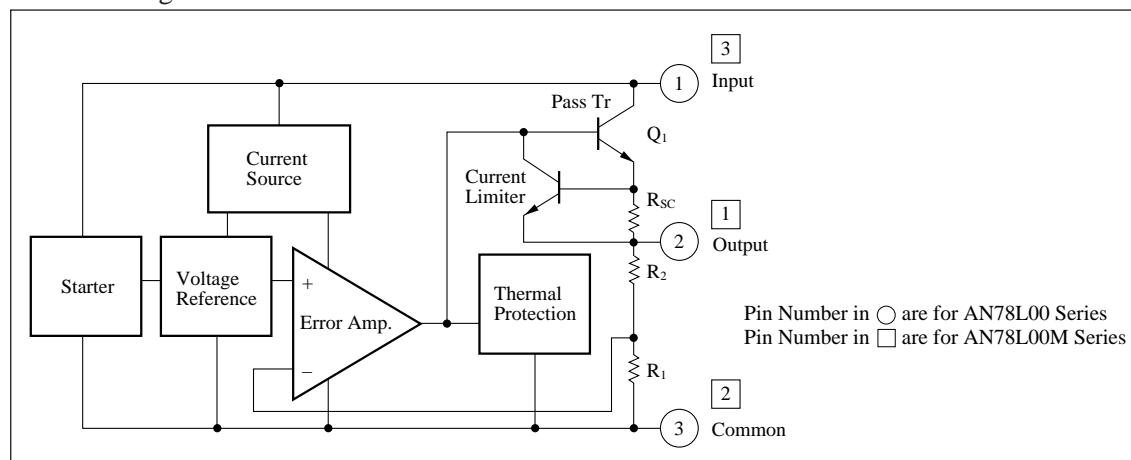

A Stabilized fixed output voltage is obtained from an unstable DC input voltage without using any external parts. Eleven types of fixed output voltage are available from 4V through 10V, 12V, 15V, 18V, 20V, and 24V. They can be used widely as power circuits with a current capacitance of up to 100mA.

## ■ Features

- No external components
- Output voltage: 4V, 5V, 6V, 7V, 8V, 9V, 10V, 12V, 15V, 18V, 20V, 24V
- Internal short-circuit current limiting
- Internal thermal overload protection
