

PWM Power Unit

The device allows continuous power control for lamps, LEDs or inductive loads.

- Highside switch
- Overtemperatur protection
- Short circuit / overload protection through pulse width reduction and overload shutdown
- Load dump protection
- Undervoltage and overvoltage shutdown with auto-restart and hysteresis
- Reverse battery protection 1)
- Timing frequency adjustable
- Controlled switching rise and fall times
- Maximum current internally limited
- Protection against loss of GND 2)
- Electrostatic discharge (ESD) protection
- Package: TO220/7 and TO220/7 E3128 (SMD), Pin 4 is shorted to the mounting flange

Note: Switching frequency is programmed with an external capacitor.
