

## PWM Power Unit

The device allows continuous power control for lamps, LEDs or inductive loads.

- Highside switch
- Overtemperatur protection
- Short circuit / overload protection through pulse width reduction and overload shutdown
- Load dump protection
- Undervoltage and overvoltage shutdown with auto-restart and hysteresis
- Reverse battery protection <sup>1)</sup>
- Timing frequency adjustable
- Controlled switching rise and fall times
- Maximum current internally limited
- Protection against loss of GND <sup>2)</sup>
- Electrostatic discharge (ESD) protection
- Package: P-DSO-20-6 (SMD)

**Note:** Switching frequency is programmed with an external capacitor.
