

Digital transistor (built-in resistors)

DTA144VUA / DTA144VKA / DTA144VSA

Features

- Built-in bias resistors enable the configuration of an inverter circuit without connecting external input resistors.
- The bias resistors consist of thin-film resistors with complete isolation to allow positive biasing of the input, and parasitic effects are almost completely eliminated.
- Only the on / off conditions need to be set for operation, making device design easy.
- Higher mounting densities can be achieved.

DTC144VUA / DTC144VKA / DTC144VSA

Features

- Built-in bias resistors enable the configuration of an inverter circuit without connecting external input resistors.
- The bias resistors consist of thin-film resistors with complete isolation to allow negative biasing of the input, and parasitic effects are almost completely eliminated.
- Only the on / off conditions need to be set for operation, making device design easy.
- Higher mounting densities can be achieved.
