

## RADIATION HARDENED POWER MOSFET THRU-HOLE (TO-204AA/AE)

**IRH7250SE**  
**200V, N-CHANNEL**  
**RAD Hard™ HEXFET® TECHNOLOGY**

### Product Summary

| Part Number | Radiation Level | RDS(on) | ID  |
|-------------|-----------------|---------|-----|
| IRH7250SE   | 100K Rads (Si)  | 0.10Ω   | 26A |

International Rectifier's RADHard™ HEXFET® MOSFET technology provides high performance power MOSFETs for space applications. This technology has over a decade of proven performance and reliability in satellite applications. These devices have been characterized for both Total Dose and Single Event Effects (SEE). The combination of low RDS(on) and low gate charge reduces the power losses in switching applications such as DC to DC converters and motor control. These devices retain all of the well established advantages of MOSFETs such as voltage control, fast switching, ease of paralleling and temperature stability of electrical parameters.

### Features:

- Single Event Effect (SEE) Hardened
- Ultra Low RDS(on)
- Low Total Gate Charge
- Proton Tolerant
- Simple Drive Requirements
- Ease of Paralleling
- Hermetically Sealed
- Light Weight

### Absolute Maximum Ratings

### Pre-Irradiation

International Rectifier Radiation Hardened MOSFETs are tested to verify their radiation hardness capability. The hardness assurance program at International Rectifier is comprised of two radiation environments. Every manufacturing lot is tested for total ionizing dose (per notes 5 and 6) using the TO-3 package. Both pre- and post-irradiation performance are tested and specified using the same drive circuitry and test conditions in order to provide a direct comparison.
