Product Summary

Part Number	Radiation Level	R _{Ds(on)}	I _D
IRHNJ57133SE	100K Rads (Si)	0.08Ω	20A

International Rectifier's R5™ technology provides high performance power MOSFETs for space applications. These devices have been characterized for Single Event Effects (SEE) with useful performance up to an LET of 80 (MeV/(mg/cm²)). The combination of low R_{Ds(on)} and low gate charge reduces the power losses in switching applications such as DC to DC converters and motor control. These devices retain all of the well established advantages of MOSFETs such as voltage control, fast switching, ease of paralleling and temperature stability of electrical parameters.

SMD-0.5

Features:

- Single Event Effect (SEE) Hardened
- Ultra Low R_{Ds(on)}
- Low Total Gate Charge
- Proton Tolerant
- Simple Drive Requirements
- Ease of Parallelizing
- Hermetically Sealed
- Surface Mount
- Ceramic Package
- Light Weight

Radiation Characteristics

IRHNJ57133SE

International Rectifier Radiation Hardened MOSFETs are tested to verify their radiation hardness capability. The hardness assurance program at International Rectifier is comprised of two radiation environments. Every manufacturing lot is tested for total ionizing dose (per notes 5 and 6) using the TO-3 package. Both pre- and post-irradiation performance are tested and specified using the same drive circuitry and test conditions in order to provide a direct comparison.
