MMDF3304

Motorola Preferred Device

**DUAL TMOS
POWER MOSFET
7.3 AMPERES
30 VOLTS
 $R_{DS(on)} = 25 \text{ m}\Omega$**

**CASE 751-06, Style 13
SO-8**

WaveFET™ devices are an advanced series of power MOSFETs which utilize Motorola's latest MOSFET technology process to achieve the lowest possible on-resistance per silicon area. They are capable of withstanding high energy in the avalanche and commutation modes and the drain-to-source diode has a very low reverse recovery time. WaveFET™ devices are designed for use in low voltage, high speed switching applications where power efficiency is important. Typical applications are dc-dc converters, and power management in portable and battery powered products such as computers, printers, cellular and cordless phones. They can also be used for low voltage motor controls in mass storage products such as disk drives and tape drives. The avalanche energy is specified to eliminate the guesswork in designs where inductive loads are switched and offer additional safety margin against unexpected voltage transients.

- Ultra Low $R_{DS(on)}$ Provides Higher Efficiency and Extends Battery Life in Portable Applications
- Characterized Over a Wide Range of Power Ratings
- Logic Level Gate Drive — Can Be Driven by Logic ICs
- Diode Is Characterized for Use In Bridge Circuits
- Diode Exhibits High Speed, with Soft Recovery
- I_{DSS} Specified at Elevated Temperature
- Miniature SO-8 Surface Mount Package — Saves Board Space
