HDTMOS™ Single N-Channel Field Effect Transistor

Medium Power Surface Mount Products

These medium power SOT-223 devices are an advanced series of power MOSFETs which utilize Motorola's High Cell Density HDTMOS process. These surface mount MOSFETs feature low $R_{DS(on)}$ and true logic level performance. They are capable of withstanding high energy in the avalanche and commutation modes and the drain-to-source diode has a very low reverse recovery time. SOT-223 HDTMOS devices are designed for use in low voltage, high speed switching applications where power efficiency is important. Typical applications are dc-dc converters, and power management in peripheral products such as printers and cordless phones. They can also be used for low voltage motor controls in mass storage products such as disk drives and tape drives. The avalanche energy is specified to eliminate the guesswork in designs where inductive loads are switched and offer additional safety margin against unexpected voltage transients.

- Low $R_{DS(on)}$ Provides Higher Efficiency and Extends Battery Life
- Logic Level Gate Drive — Can Be Driven by Logic ICs
- SOT-223 Saves Board Space and Height
- Diode Is Characterized for Use In Bridge Circuits
- I_{DSS} Specified at Elevated Temperature
- Avalanche Energy Specified
- Mounting Information for SOT-223 Package Provided
- Use MMFT5N02HDT1 to order the 7 inch/1000 unit reel
Use MMFT5N02HDT3 to order the 13 inch/4000 unit reel
