

1.5 AMP POSITIVE ADJUSTABLE VOLTAGE REGULATOR APPROVED TO DESC DRAWING 7703402

Please see mechanical outlines herein

Three Terminal, Precision Adjustable Positive Voltage Regulator In Hermetic Style Packages (LM117HV)

FEATURES

- Similar To Industry Standard LM117HV
- Approved To DESC Standardized Military Drawing Number 7703402
- Built In Thermal Overload Protection
- Short Circuit Current Limiting
- Available In Six Package Styles

DESCRIPTION

These three terminal positive regulators are supplied in hermetically sealed packages. All protective features are designed into the circuit, including thermal shutdown, current-limiting, and safe-area control. With heat sinking, these devices can deliver up to 1.5 amps of output current. The LCC-20 device is limited to .5 amps. The unit also features output voltages that can be fixed from 1.2 volts to 57 volts using external resistors.

ABSOLUTE MAXIMUM RATINGS T_c @ 25°C

Power Dissipation

Case 2	1.1 W
Case-All Others.....	20 W

Input - Output Voltage Differential	40 V
---	------

Operating Junction Temperature Range	- 55°C to + 150°C
--	-------------------

Storage Temperature Range	- 65°C to + 150°C
---------------------------------	-------------------

Lead Temperature (Soldering 10 seconds)	300°C
---	-------

Thermal Resistance, Junction to Case:

Case 2, LCC-20	17°C/W
----------------------	--------

Case U & M, TO-257 (Isol) and SMD-3	4.2°C/W
---	---------

Case T&N, TO-257 (Non-Isol) and SMD-1	3.5°C/W
---	---------

Case Y, TO-3.....	.3.0°C/W
-------------------	----------

3.5

Maximum Output Current:

Case 25 A
--------------	------

Case-All Others.....	1.5 A
----------------------	-------

Recommended Operating Conditions:

Output Voltage Range	1.2 to 37 VDC
----------------------------	---------------

Ambient Operating Temperature Range (T_A).....	- 55°C to + 125°C
--	-------------------

Input Voltage Range	4.25 to 41.25 VDC
---------------------------	-------------------

ELECTRICAL CHARACTERISTICS -55°C T_A 125°C, $I_L = 8\text{mA}$ (unless otherwise specified)

Notes:

- Load and Line Regulation are specified at a constant junction temperature. Pulse testing with low duty cycle is used.
Changes in output voltage due to heating effects must be taken into account separately.
- If not tested, shall be guaranteed to the specified limits.
- The • denotes the specifications which apply over the full operating temperature range.

Notes: Please see previous page.

STANDARD APPLICATION

- * C_{in} is required if regulator is located an appreciable distance from power supply filter.
- ** C_o is not needed for stability, however it does improve transient response.

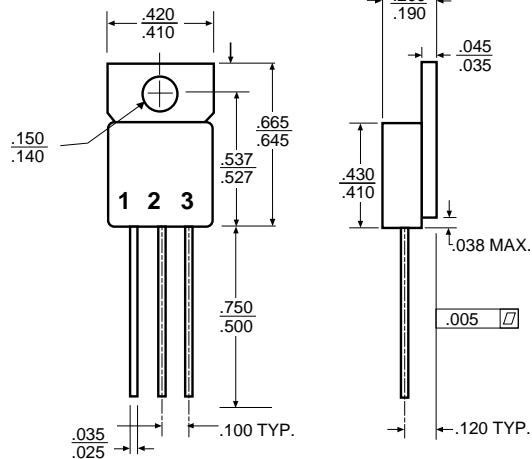

$$V_{out} = 1.25 \text{ V} \left(1 + \frac{R_2}{R_1}\right) + I_{Adj} R_2$$

Since I_{Adj} is controlled to less than 100 µA, the error associated with this term is negligible in most applications.
