All Rights Reserved.

Attention please!

As far as patents or other rights of third parties are concerned, liability is only assumed for components, not for applications, processes and circuits implemented within components or assemblies.

The information describes the type of component and shall not be considered as assured characteristics.

Terms of delivery and rights to change design reserved.

Due to technical requirements components may contain dangerous substances. For information on the types in question please contact your nearest Infineon Technologies Office.

Infineon Technologies AG is an approved CECC manufacturer.

Packing

Please use the recycling operators known to you. We can also help you – get in touch with your nearest sales office. By agreement we will take packing material back, if it is sorted. You must bear the costs of transport.

For packing material that is returned to us unsorted or which we are not obliged to accept, we shall have to invoice you for any costs incurred.

Components used in life-support devices or systems must be expressly authorized for such purpose!

Critical components¹ of the Infineon Technologies AG, may only be used in life-support devices or systems² with the express written approval of the Infineon Technologies AG.

- 1 A critical component is a component used in a life-support device or system whose failure can reasonably be expected to cause the failure of that life-support device or system, or to affect its safety or effectiveness of that device or system.
- 2 Life support devices or systems are intended (a) to be implanted in the human body, or (b) to support and/or maintain and sustain human life. If they fail, it is reasonable to assume that the health of the user may be endangered.

Dual LNA

PMB2362 V1.1

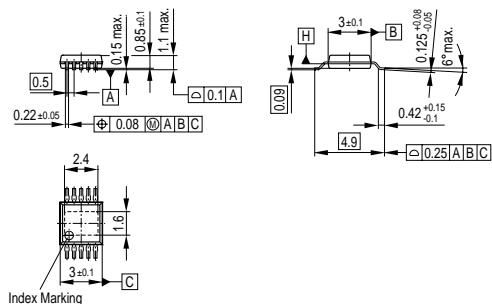

General Description

The PMB2362 is a dual band LNA circuit with excellent performance designed for GSM900 and GSM1800.

Features

- New B6HF technology, $f_T = 25\text{GHz}$
- Extreme small outline P-TSSOP-10-2 package with heat sink
- Both LNAs with prematched input, only 2 external matching components required
- GSM900 LNA output matched to 50 Ohm
- Both LNAs with switchable gain, 20dB gain step
- LNA1: 17dB gain,
1.5dB noise figure @ 0.95GHz
- LNA2: 19dB gain,
2.0dB noise figure @ 1.85GHz
- Supply voltage range from 2.7V to 3.6V
- Power down function
- Temperature range -40° to 85°C
- Reduced external components

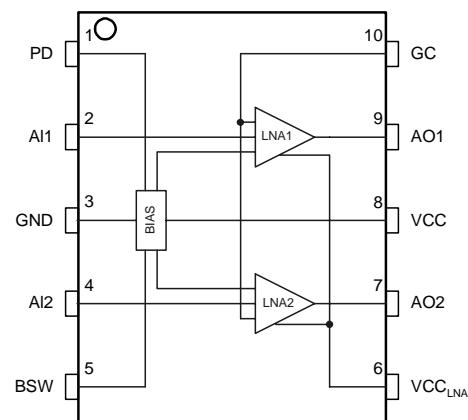

Package style

P-TSSOP-10-2

Heat Sink Connection for IC Grounding

Functional Block Diagram

Applications

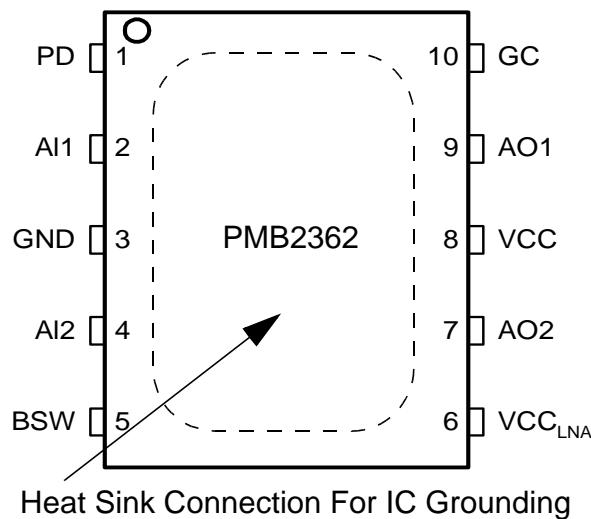

- Dual band wireless frontends
GSM900/1800
- Excellent combination with Infineon GSM single chip SMARTi PMB6250

1.4 Circuit Description

General Description

The PMB2362 is a dual band LNA circuit designed for dual band wireless frontends with excellent performance.

LNA1

The LNA1 is designed for input frequencies between 0.9 and 1.0GHz. Entering the IC at the base input pin AI1 the RF input signal is amplified in the LNA1 stage. The gain of this LNA stage is controlled by the DC level at pin GC and can be adjusted in a 20 dB step. The LNA output is internal matched and at pin AO1 the amplified and matched signal is available for further use.

LNA2

The LNA2 is designed for input frequencies between 1.8 and 1.9GHz. Entering the IC at the base input pin AI2 the RF input signal is amplified in the LNA2 stage. The gain of this LNA stage is also controlled by the DC level at pin GC and can be adjusted in a fixed gain step. The open collector LNA output at pin AO2 has to be connected to VCC and external matching elements.

COMMON

VCC is the supply voltage for both LNAs. The grounding is done with the heat sink at the bottom side of the package. An internal bias driver generates supply voltage and temperature compensated reference voltages. The PD pin allows the circuit to be switched in a low power consuming (sleeping) mode. All pins with the exception of AI1/2, AO1/2 and GND are ESD protected.

2 Electrical Characteristics

2.1 Absolute Maximum Ratings

The maximum ratings may not be exceeded under any circumstances, not even momentarily and individually, as permanent damage to the IC will result.

Ambient temperature $T_{amb} = -40^{\circ}\text{C}...+85^{\circ}\text{C}$

Parameter	Symbol	Limit Values		Units	Remarks
		Min	Max		
Supply Voltage	V_S	-0.3	5.0	V	
Input Voltage	V_{PD}	-0.3	$V_S+0.3$ 5.0max.	V	
Input Voltage	V_{BSW}	-0.3	$V_S+0.3$ 5.0max.	V	
Input Voltage	V_{GC}	-0.3	$V_S+0.3$ 5.0max.	V	$V_{PD}>0.5\text{V}$
Input Voltage	V_{GC}	-0.3	3.8	V	$V_{PD}=0\text{V}$
Input Voltage (AC Peak, Freq.>1MHz)	$V_{AI1/2}$	$V_S-5.5$ -2.0min.		V	$V_{PD}=0\text{V}$ $I_{AI1/2}<n\text{A}$
Open Collector Output Voltage	$V_{AO2/VCCLNA}$	$V_S-5.5$ -0.3min	$V_S+2.0$ 5.0max.	V	
Input Current	$I_{AI1/2}$		6.0	mA	DC and AC
Junction Temperature	T_j		125	°C	
Storage Temperature	T_S	-40	125	°C	
Thermal Resistance	R_{thJA}		100	K/W	Junction to Ambient
Thermal Resistance	R_{thJL}		12	K/W	¹⁾ Junction to Lead
ESD integrity	V_{ESD}	tbd.	tbd.	V	

1) Heat Sink Temperature Fixed At 25 Degrees Celsius

2.2 Operational Range

Within the operational range the IC operates as described in the circuit description. The AC/DC characteristic limits are not guaranteed.

Supply voltage $V_S = 2.7V \dots 3.6V$, Ambient temperature $T_{amb} = -40^\circ C \dots 85^\circ C$

Parameter	Symbol	Limit Values		Units	Remarks
		Min	Max		
AI1 Input Frequency LNA1	f_{AI1}	0.9	1.0	GHz	
AI2 Input Frequency LNA2	f_{AI2}	1.8	1.9	GHz	
Total Circuit On	V_{PD}	1.5	V_S	V	
Total Circuit Off	V_{PD}	0	0.5	V	
Gain Control Low Gain	V_{GC}	1.5	V_S	V	
Gain Control High Gain	V_{GC}	0	0.5	V	
Bandswitch LNA1 On	V_{BSW}	0	0.5	V	
Bandswitch LNA2 On	V_{BSW}	1.5	V_S	V	

Note: Power levels refer to 50 Ohms impedance

2.3 AC/DC Characteristics

AC/DC characteristics involve the spread of values guaranteed within the specified supply voltage and ambient temperature range. Typical characteristics are the median of the production.

Supply voltage $V_{VCC} = 2.7V \dots 3.6V$, Ambient temperature $T_{amb} = +25^\circ$

Parameter	Symbol	Limit Values			Units	Test Conditions	Test Item
		Min	Typ	Max			
Supply Current							
Supply current, 0.95GHz	$I_{6,8,9}$		9.5		mA	V_{PD} high, V_{BSW} low	1.1
Supply current, 1.85GHz	$I_{6,7,8}$		8.5		mA	V_{PD} high, V_{BSW} high	1.2
Supply current, sleep	I_8		<5		µA	V_{PD} low	1.3

AC/DC Characteristics (continued)

AC/DC characteristics involve the spread of values guaranteed within the specified supply voltage and ambient temperature range. Typical characteristics are the median of the production.

Supply voltage $V_{VCC} = 2.7V \dots 3.6V$, Ambient temperature $T_{amb} = +25^\circ$

Parameter	Symbol	Limit Values			Units	Test Conditions	Test Item ¹⁾

Remark: IICP3 Measured with 800kHz differential tone

3 Test Circuit

3.1 S-Parameter Test Circuit

Test Circuit 1: 925 MHz - 960 MHz

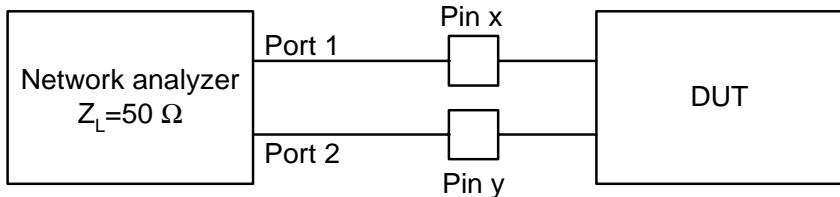

Test Circuit 2: 1805 MHz - 1880 MHz

Component values for blocking capacitors 10p @ VCC, 27p else

Blocking capacitors at Pin: 1, 5, 6, 8 and 10

DC Biasing LNA2 via Network Analyzer

3.2 S-Parameter Measurement Conditions

S-Parameter Measurement of LNA1/2 : S11, S12, S21, S22

The S-Parameters are tested at the indicated frequency on Duroid 5880 Teflon Boards.

Via the NWA the capacitive coupling is done.

The output levels at port1 and 2 for pin x and y are -30dbm.

S11 and S22 have to be considered as design hints and are measured with Infineon testboards

All S-Parameters are measured.

Test	Test frequency MHz	Pin X	Pin Y
Amp. S11, S12, S21, S22	30 - 3000	AI1/2	AO1/2
Amp. S11, S12, S21, S22	900-1000	AI1	AO1
Amp. S11, S12, S21, S22	1800-1900	AI2	AO2
