

## FEATURES

- 3.3V power supply
- 50ps output-to-output skew
- Low power
- Synchronous enable/disable
- Multiplexed clock input
- 75KΩ internal input pull-down resistors
- ESD protection of 2000V
- Available in 16-pin SOIC package

## DESCRIPTION

The SY100EL15L is a low skew 1:4 clock distribution IC designed explicitly for low skew clock distribution applications. The device can be driven by either a differential or single-ended ECL or, if positive power supplies are used, PECL input signal. If a single-ended input is to be used the VBB output should be connected to the  $\overline{\text{CLK}}$  input and bypassed to ground via a 0.01μF capacitor. The VBB output is designed to act as the switching reference for the input of the EL15 under single-ended input conditions. As a result, this pin can only source/sink up to 0.5mA of current.

The EL15 features a multiplexed clock input to allow for the distribution of a lower speed scan or test clock along with the high speed system clock. When LOW (or left open and pulled LOW by the input pull-down resistor) the SEL pin will select the differential clock input.

The common enable ( $\overline{\text{EN}}$ ) is synchronous so that the outputs will only be enabled/disabled when they are already in the LOW state. This avoids any chance of generating a runt clock pulse when the device is enabled/disabled as can happen with an asynchronous control. The internal flip flop is clocked on the falling edge of the input clock, therefore all associated specification limits are referenced to the negative edge of the clock input.

When both differential inputs are left open, CLK input will pull down to VEE and  $\overline{\text{CLK}}$  input will bias around VCC/2.

## PIN NAMES

| Pin  | Function                   |
|------|----------------------------|
| CLK  | Differential Clock Inputs  |
| SCLK | Synchronous Clock Input    |
| EN   | Synchronous Enable         |
| SEL  | Clock Select Input         |
| VBB  | Reference Output           |
| Q0-3 | Differential Clock Outputs |

## TRUTH TABLE

| CLK | SCLK | SEL | $\overline{\text{EN}}$ | Q  |
|-----|------|-----|------------------------|----|
| L   | X    | L   | L                      | L  |
| H   | X    | L   | L                      | H  |
| X   | L    | H   | L                      | L  |
| X   | H    | H   | L                      | H  |
| X   | X    | X   | H                      | L* |

\* On next negative transition of CLK or SCLK

**ABSOLUTE MAXIMUM RATINGS<sup>(1)</sup>**

| Symbol           | Rating                                  | Value      | Unit |
|------------------|-----------------------------------------|------------|------|
| V <sub>EE</sub>  | Power Supply (V <sub>CC</sub> = 0V)     | -8.0 to 0  | VDC  |
| V <sub>I</sub>   | Input Voltage (V <sub>CC</sub> = 0V)    | 0 to -6.0  | VDC  |
| I <sub>OUT</sub> | Output Current<br>-Continuous<br>-Surge | 50<br>100  | mA   |
| T <sub>A</sub>   | Operating Temperature Range             | -40 to +85 | °C   |

**NOTES:**

1. Absolute maximum rating, beyond which, device life may be impaired, unless otherwise specified on an individual data sheet.
2. Parametric values specified at: 3 volt Power Supply Range 100EL15L Series -3.0V to -3.8V.

**DC ELECTRICAL CHARACTERISTICS**V<sub>EE</sub> = 3.3V ±10%; V<sub>CC</sub> = GND<sup>(1)</sup>

| V <sub>CMR</sub>                     | Common Mode Range <sup>(2)</sup><br>V <sub>PP</sub> < 500mV<br>V <sub>PP</sub> ≥ 500mV | -2.0<br>-1.8           | -0.4<br>-0.4      | -2.1<br>-1.9         | -0.4<br>-0.4      | -2.1<br>-1.9           | —<br>—      | -0.4<br>-0.4      | -2.1<br>-1.9           | -0.4<br>-0.4      | mV   |
| t <sub>r</sub><br>t <sub>f</sub>     | Output Rise/Fall Times <sub>Q</sub><br>(20% – 80%)                                     | 375                    | 625               | 325                  | 575               | 325                    | —           | 575               | 325                    | 575               | ps   |

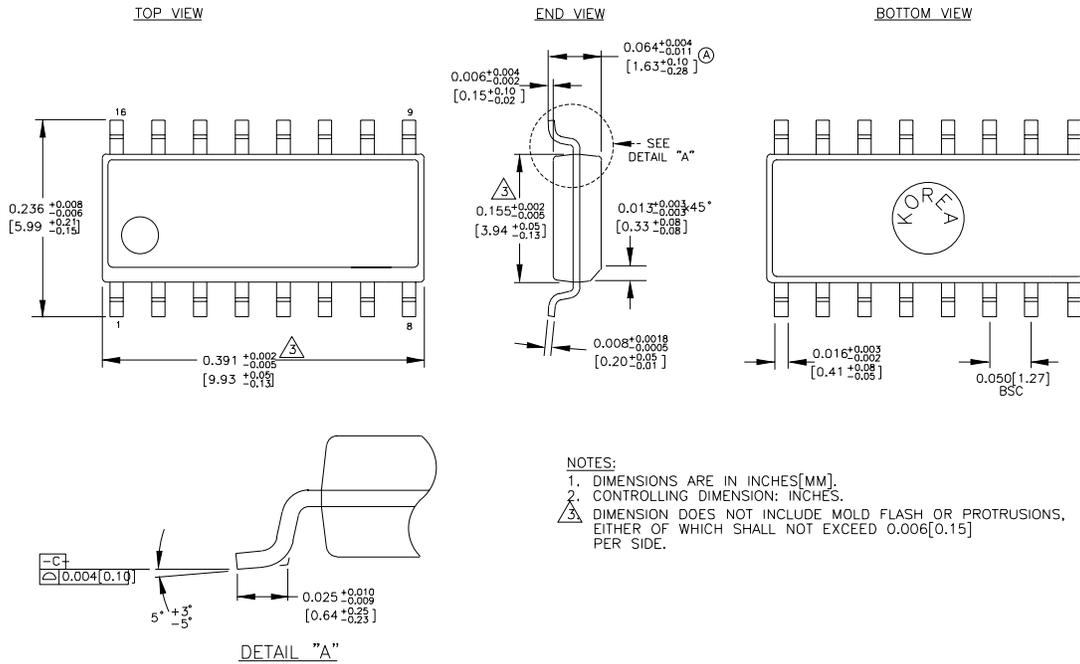

**NOTES:**

- Skews are specified for identical LOW-to-HIGH or HIGH-to-LOW transitions.
- V<sub>CMR</sub> is referenced to the most positive side of the differential input signal. Normal operation is obtained when the input signals are within the V<sub>CMR</sub> range and the input swing is greater than V<sub>PP</sub>(Min.) and <1V. The lower end of the V<sub>CMR</sub> range varies 1:1 with V<sub>EE</sub>. The numbers in the spec table assume a nominal V<sub>EE</sub> = -3.3V. Note for PECL operation, the V<sub>CMR</sub>(Min) will be fixed at 3.3V - |V<sub>CMR</sub>(Min)|.

**PRODUCT ORDERING CODE**

| Ordering Code  | Package Type | Operating Range |
