

FEATURES

- 3.3V power supply
- 2.0ns typical propagation delay
- <500ps typical output-to-output skew
- Differential LVPECL inputs
- 24mA LVTTL outputs
- Flow-through pinouts
- Available in 8-pin SOIC package

Precision Edge™

DESCRIPTION

The SY10/100ELT23L are dual differential LVPECL-to-LVTTL translators with +3.3V power supply. Because LVPECL (Low Voltage Positive ECL) levels are used, only +3.3V and ground are required. The small outline 8-lead SOIC package and the low skew, dual gate design of the ELT23L makes it ideal for applications which require the translation of a clock and a data signal.

The ELT23L is available in both ECL standards: the 10ELT is compatible with positive ECL 10H logic levels, while the 100ELT is compatible with positive ECL 100K logic levels.

NOTE:

1. Permanent device damage may occur if ABSOLUTE MAXIMUM RATINGS are exceeded. This is a stress rating only and functional operation is not implied at conditions other than those detailed in the operational sections of this data sheet. Exposure to ABSOLUTE MAXIMUM RATING conditions for extended periods may affect device reliability.
