

**ECL Pro™**

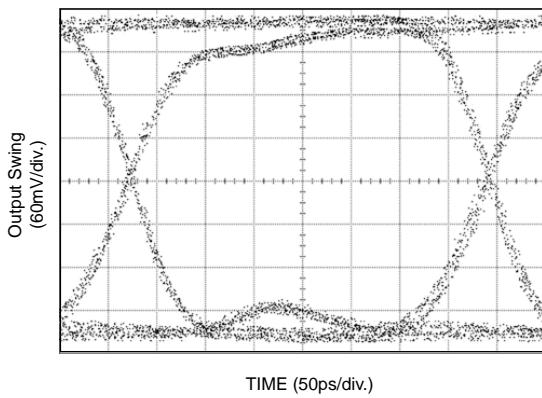

## FEATURES

- **2:1 PECL/ECL multiplexer**
- **Guaranteed AC-performance over temperature/voltage**
  - >3GHz  $f_{MAX}$  (toggle)
  - <200ps rise/fall time
  - <420ps propagation delay (D-to-Q)
- **Low jitter performance**
  - Random jitter: <1ps (rms)
  - Deterministic jitter: <15ps (pk-pk)
  - Total jitter (clock): <1ps (pk-pk)
- **Flexible supply voltage: 3V to 5.5V**
- **Wide operating temperature range: -40°C to +85°C**
- **Available in 8-pin MSOP and SOIC packages**

## APPLICATIONS

- SONET
- Gig Ethernet
- Fibre Channel
- Transponders

## TYPICAL PERFORMANCE

**2.7Gbps, 2<sup>23</sup> – 1 PRBS**

## DESCRIPTION

The SY10/100EP58V are 3.3V/5V, precision, high-speed, 2:1 multiplexers. Both devices are pin-for-pin, plug-in replacements for the MC10/100EP58D/DT in 8-pin SOIC and 6-pin TSSOP (MSOP) packages. The signal-path inputs (Da and Db) are single-ended PECL/ECL compatible, and can accept a signal swing as low as 150mV. All I/O pins are 10K/100K EP ECL/PECL compatible.

AC-performance is guaranteed over the industrial -40°C to +85°C temperature range and 3.0V to 5.5V supply voltage range. Maximum throughput ( $f_{MAX}$ ) is guaranteed to be 3GHz with a differential output swing  $\geq$ 400mV. In addition, these multiplexers are optimized for low-jitter applications. The SY10EP58V and SY100EP58V are designed to operate in either ECL/PECL or PECL/LVPECL mode. The SY100EP58V is internally temperature compensated, thus is 100K EP ECL/PECL compatible—I/O logic levels remain constant over temperature.

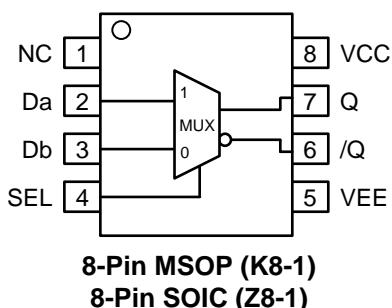

The SY10/100EP58V is part of Micrel's high-speed, Precision Edge timing and distribution family. For applications that require a differential I/O combination, consult the Micrel website at [www.micrel.com](http://www.micrel.com), and choose from a comprehensive product line of high-speed, low skew fanout buffers, translators, and clock dividers.

## PIN DESCRIPTION

Pin Number	Pin Name	Pin Function
1	NC	No connect.
2, 3	Da, Db <sup>(1)</sup>	100KEP PECL/ECL single-ended input channels a and b. Multiplexing of these inputs are controlled by SEL. The signal inputs include internal 75kΩ pull-down resistors. Default condition is LOW when left floating. The input signal should be terminated externally. See "Termination Recommendations" section.
4	SEL	100KEP PECL/ECL compatible 2:1 mux select control. See "Mux Select Truth Table." Enable pin includes an internal 75kΩ pull-down resistor. Default condition is LOW.
5	VEE	Negative Power Supply: For PECL/LVPECL connect to ground. Both V <sub>EE</sub> pins must be connected together, externally on the PCB, for proper operation.
6, 7	/Q, Q	100KEP PECL/ECL compatible differential output. PECL/ECL termination is with a 50Ω resistor to V <sub>CC</sub> –2V. Unused single-ended outputs must have a balanced load. For AC-coupled applications, the output stage emitter follower must have a DC current path to ground. See "Termination Recommendations" section.
8	VCC	Positive Power Supply. All V <sub>CC</sub> pins must be connected to the same power supply externally. Bypass with 0.1μF//0.01μF low ESR capacitors.

**Note 1.** If the inputs are AC-coupled, the outputs Q, and /Q will experience duty cycle distortion because the input levels do not track the internal reference voltage.
