

PM150CSD120

FLAT-BASE TYPE
INSULATED PACKAGE

PM150CSD120

FEATURE

- a) Adopting new 4th generation planar IGBT chip, which performance is improved by 1μm fine rule process.
- b) Using new Diode which is designed to get soft reverse recovery characteristics.
- 3φ 150A, 1200V Current-sense IGBT for 15kHz switching
- Monolithic gate drive & protection logic
- Detection, protection & status indication circuits for over-current, short-circuit, over-temperature & under-voltage (P-Fo available from upper leg devices)
- Acoustic noise-less 30kW class inverter application

APPLICATION

General purpose inverter, servo drives and other motor controls

INSULATED PACKAGE****PRECAUTIONS FOR TESTING**

- Before applying any control supply voltage (V_D), the input terminals should be pulled up by resistors, etc. to their corresponding supply voltage and each input signal should be kept off state.
After this, the specified ON and OFF level setting for each input signal should be done.
- When performing "OC" and "SC" tests, the turn-off surge voltage spike at the corresponding protection operation should not be allowed to rise above V_{CES} rating of the device.
(These test should not be done by using a curve tracer or its equivalent.)

- Design the PCB pattern to minimize wiring length between opto-coupler and IPM's input terminal, and also to minimize the stray capacity between the input and output wirings of opto-coupler.
- Quick opto-couplers : TPLH, TPLH $\leq 0.8\mu\text{s}$. Use High CMR type. The line between opto-coupler and intelligent module should be shortened as much as possible to minimize the floating capacitance.
- Slow switching opto-coupler : recommend to use at CTR = 100 ~ 200%, Input current = 8 ~ 10mA, to work in active.
- Use 4 isolated control power supplies (Vb). Also, care should be taken to minimize the instantaneous voltage charge of the power supply.
- Make inductance of DC bus line as small as possible, and minimize surge voltage using snubber capacitor between P and N terminal.
- Use line noise filter capacitor (ex. 4.7nF) between each input AC line and ground to reject common-mode noise from AC line and improve noise immunity of the system.
