

SD43F

FEATURES

PACKAGES

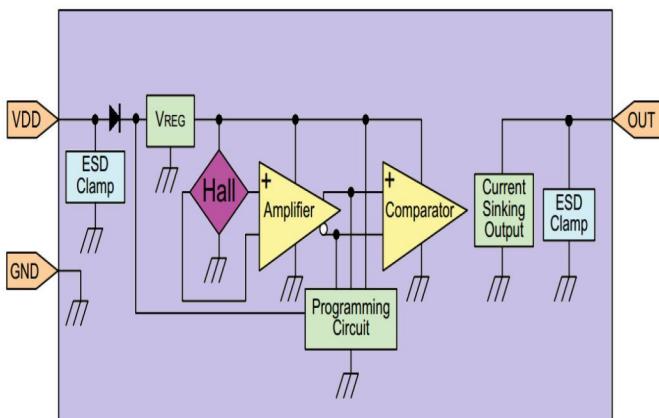

- ✧ Wide operating voltage range: 3.8V to 30V
- ✧ Built-in reverse voltage protecting capability
- ✧ Robust design: will operate up to 150°C
- ✧ Package: TO-92S package
- ✧ Unipolar respond to a single pole: North (AT) or South (A, BT and ET), making these products well-suited for shift selectors, wiper end/home position, door ajar/open, and vane-interrupt systems etc.
- ✧ RoHS-compliant material meets directive 2011/65/EU

APPLICATIONS

- ✧ Speed and RPM sensing
- ✧ Door or lid closure detection
- ✧ Flow-rate sensing
- ✧ Printer head position sensing
- ✧ Robotics control
- ✧ Medication bin monitor on portable drug carts

DESCRIPTION

The SD43F is small, versatile digital Hall-effect devices that are operated by the magnetic field from a permanent magnet or an electromagnet.

These unipolar sensors are designed to meet the requirements of a wide range of potential applications. These economical unipolar sensors are well suited for simple, high-volume, cost-sensitive position and motion sensing applications.

The 3.8 Vdc to 30Vdc supply voltage range allows this device to be used in very wide voltage applications.

4. ESD Protections

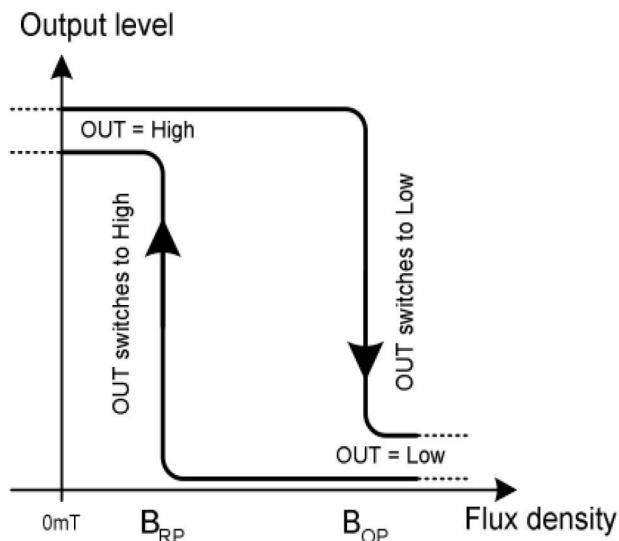

Parameter	Value	Unit
HBM (human body mode, C=100pF, R=1.5 kohm)	+/-8000	V

5. Function Description

The SD43F exhibits unipolar magnetic switching characteristics. Therefore, it requires south or north poles to operate properly.

The device behaves as a unipolar with asymmetric operating and release switching points. This means While the magnetic flux density(B) is larger than operate point (B_{OP}), the output will be turned on (Low), while the magnetic flux density(B) is lower than release point (B_{RP}), then turn off (High).
