DIODE UNITS - Two

The two diodes are located at the negative end of the filament. They are independent of each other and of the pentode unit except for the common filament. Diode curves under Type 687 apply to the IF7-GV.

- o Voltages at plate and screen will be Plate-Supply and Screen-Supply voltages minus voltage drops in plate and screen resistors, respectively.
- ▲ Load resistance, across which output voltage is developed, consists of plate resistor, blocking condenser, and grid resistor of following tube.
- ** For following amplifier tube.
- The d-c resistance in the grid circuit should not exceed 1.0 megohm.
