UHF BEAM POWER TUBE

WATER-COOLED ELECTRODES

GENERAL DATA

Electrical:

Filament*, 2-Section Multi-strand
 Thoriated Tungsten:

Voltage per section (AC or DC)	{ 1.35 av. volts	volts
	{ 1.50 max. volts	volts
Current per section at 1.35 volts	1000	amp
Starting current per section	Must never exceed 1500 amperes, even momentarily	
Cold resistance per section	0.0002	ohm
Minimum heating time	10	seconds
Supply circuits	See Circuits	

Mu-Factor, Grid No.2 to Grid No.1 for plate volts = 3000, grid-no.2 volts = 800, and plate amperes = 4 6

Direct Interelectrode Capacitances:

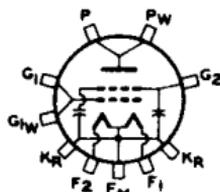

Grid No.1 to plate	0.1 max.	$\mu\mu\text{f}$
Input	335	$\mu\mu\text{f}$
Output	30	$\mu\mu\text{f}$

Internal Bypass Capacitors between Grid No.2 and Cathode (Total) 15000 $\mu\mu\text{f}$

Mechanical:

Terminal Connections:

- F₁ - Fil. Sect. No.1 & Water Conn.
- F₂ - Fil. Sect. No.2 & Water Conn.
- G₁ - RF Grid-No.1 Term. Contact Surface
- G_{1W} - DC Grid-No.1 & Water Conn.
- G₂ - DC Grid-No.2 & Water Conn.

- K_R - RF Cath. Term. Contact Surface For Circuit Returns
- F_M - Common Point of Fil. Sections & Water Conn.
- P - RF Plate Term. Contact Surface
- P_W - DC Plate & Water Conn.

For location of respective terminals, see Dimensional Outline

Mounting Position Tube axis vertical, with plate terminal either up or down

Overall Length 7-11/32" + 3/8" - 1/2"

Maximum Diameter 11-3/8"

Air Cooling:

Forced-air cooling of the ceramic bushing at the grid-No.1 seal and at the plate seal is required only if the temperature of the ceramic bushing at either seal exceeds the specified maximum value of 150°C. Under such conditions, provision should be made for blowing air at the ceramic bushings through suitable openings in the coaxial-cylinder cavity circuit.

*: See operating notes on conserving filament life.

6448

6448

UHF BEAM POWER TUBE

Water Cooling:

Water cooling of the filament-section blocks, rf cathode terminals, grid-No.1 block, grid-No.2 block, and plate is required. The water flow must start before application of any voltage and preferably should continue for several seconds after removal of all voltages. Interlocking of the water flow through each of the cooled elements with all power supplies is recommended to prevent tube damage in case of failure of adequate water flow.

Water Flow:

	Min. gpm	Typical gpm	Pressure Drop* psi
To Filament-Section- No.1 Block	0.5	0.5	2
		1.2	11
To Filament-Section- No.2 Block	0.5	0.5	2
		1.2	11
To Filament Mid-Tap Block . .	0.5	0.5	2
		1.2	10
To Grid-No.1 Block	0.5	0.5	1
		1.2	6
To Grid-No.2 Block	0.5	0.5	3
		1.2	15

To Plate:

For plate dissipation of 10 kw	4.5	-	3.5
For plate dissipation of 15 kw	7.5	-	8.5
For plate dissipation of 20 kw	11	-	16
For plate dissipation of 26 kw	14	-	25

Gauge Pressure at Any Inlet	70 max.	psi
Ceramic Bushing Temperature	150 max.	°C
Outlet Water Temperature (Any outlet)	70 max.	°C
Weight (Approx.)	25	lbs

RF POWER AMPLIFIER--Class B Television Service

Synchronizing-level conditions per tube unless otherwise indicated

Maximum CCS* Ratings, Absolute Values:

	Up to 1000 Mc	
DC PLATE VOLTAGE	7000 max.	volts
DC PLATE-SUPPLY VOLTAGE	8000 max.	volts
DC GRID-No.2 (SCREEN) VOLTAGE	1000 max.	volts
DC GRID-No.2-SUPPLY VOLTAGE	1100 max.	volts

* Directly across cooled element for the indicated flow.

6448

UHF BEAM POWER TUBE

- key-down conditions per tube without amplitude modulation. Modulation essentially negative may be used if the positive peak of the audio-frequency envelope does not exceed 115% of the carrier conditions.
- * The driver stage is required to supply tube losses and rf circuit losses. The driver stage should be designed to provide an excess of power above the indicated value to take care of variations in line voltage, in components, in initial tube characteristics, and in tube characteristics during life.
- ** This value of useful power is measured at load of output circuit having indicated efficiency.
- † obtained preferably from a separate source, or from the plate-supply voltage with a voltage divider, or through a series resistor. A series grid-No.2 resistor should not be used if the 6448 or a preceding stage is keyed. In this case, the regulation of the source should be sufficient to prevent the grid-No.2 voltage from rising above 1100 volts under key-up conditions; and additional fixed grid-No.1 bias must be provided to limit the plate current.
- †† obtained from fixed supply, by grid-No.1 resistor, by cathode resistor, or by combination methods.

CHARACTERISTICS RANGE VALUES FOR EQUIPMENT DESIGN

	Note	Min.	Max.	
Filament Current per Section	1	900	1100	amp
Filament Current per Section	2	960	1160	amp
Grid-No.1 Voltage	1,3	-	-160	volts
Useful Power Output	1,4	11000	-	watts
Power Gain	1,4,5	10	-	

Note 1: With 1.35 volts ac per section.

Note 2: With 1.5 volts ac per section.

Note 3: With 2-phase excitation of the filament sections, dc plate voltage of 6500 volts, dc grid-No.2 voltage of 800 volts, and dc grid-No.1 voltage adjusted to give a dc plate current of 0.5 ampere.

Note 4: With 2-phase excitation of the filament sections. In rf power amplifier circuit having bandwidth of 7 Mc as defined by the half-power points and with dc plate voltage of 7000 volts, dc grid-No.2 voltage of 800 volts, dc grid-No.1 voltage of -130 volts, drive adjusted to give dc plate current of 6.75 amperes, and frequency of 900 Mc.

Note 5: With driving power measured at input to input-cavity circuit fed by transmission line having voltage-standing-wave ratio not greater than 2. Power gain is ratio of useful power output to driving power.

OPERATING NOTES

Instructions for conserving filament life of the 6448 and for the use of high-speed electronic protective devices with it are given in the technical bulletin. A copy of the technical bulletin for the 6448 will be supplied on request to Commercial Engineering, RCA, Harrison, N.J.
