

**For frequencies up to 70 MHz**

Ordering code Q53-X2021

Vapor-cooled triode with coaxial grid lead-through, suitable for use as RF amplifier, oscillator and modulator.

Dimensions in mm

RSE0508-H

- ① 12 tapholes M5 (12 × 30°)
- ② Taphole M6 for screw-in handle RöZub31V
- ③ Taphole M5 for tube fuse RöSich4

Approx. weight 17 kg

**Heating**

Heater voltage	$U_F$	12,6	V
Heater current	$I_F$	$\approx 160$	A
Heating: direct			
Cathode: thoriated tungsten			

**Characteristics**

Emission current at $U_A = U_G = 700$ V	$I_{em}$	75	A
Amplification factor at $U_A = 1$ to 6 kV, $I_A = 1$ A	$\mu$	58	
Transconductance at $U_A = 3$ kV, $I_A = 1$ A	s	60	mA/V

**Capacitances**

Cathode/grid	$C_{kg}$	$\approx 120$	pF
Cathode/anode	$C_{ka}$	$\approx 1,4$	pF <sup>1)</sup>
Grid/anode	$C_{ga}$	$\approx 50$	pF

**Accessories****Ordering code**

Mounting instruction	RöMo64	
Mounting instruction	RöMo85	
Cathode connecting strip (2 for each tube)	RöKat221	Q81-X1136
Grid terminal	RöGit01	Q81-X901
Socket wrench for tube fuse	RöZub10	Q81-X2110
Handle	RöZub31V	Q81-X2133
Tube fuse	RöSich4	Q81-X1404
Pull switch for tube fuse	RöKt11	Q81-X1311
Boiler	RöKüV221	Q81-X1681
Insulating pipe at water inlet	RöKüV31Zub4	Q81-X1634
Union at water inlet	RöKüV31Zub7	Q81-X1637
Insulating pipe at vapor outlet	RöKüV201Zub3	Q81-X1673
Gasket at vapor outlet	RöKüV201Zub8	Q81-X1678
Insulator	RöKüV221Zub5K	Q81-X1686
Water level stabilizer with control electrodes	RöZubV4	Q81-X2105
LL electrolytic target	RöEl21	C65055-A667-A21
Gasket ring for boiler	RöN9373	C65051-A182-C506

1) Measured by means of a 30 cm × 30 cm screening plate in the grid terminal plane.

**RF amplifier,  
class B operation, grounded cathode circuit**

#### Maximum ratings

Frequency	$f$	10	30	MHz
Anode voltage (dc)	$U_A$	16	12,5	kV

Effective load resistance (anode to anode)	$R_{AA}$	-	2260	-	1810	$\Omega$

**Tube mounting**

Axis vertical, anode down.

For connection of the cathode use the terminals listed under "Accessories".

For the connection of the grid a number of tapholes M5 is provided at the grid terminal ring; the delivery includes knurled head screws for this purpose.

The use of the concentric grid terminal as listed under "Accessories" is recommended if a very low grid line inductance is required. This concentric grid terminal is equipped with a large number of contact springs which closely join the surface of the grid contact ring.

**Maximum tube surface temperature**

The temperature of the glass and metal parts and of the cathode terminals must not exceed 220 °C at any point.

**Vapor cooling**

Cooling data for maximum anode dissipation	$P_{A\ max} = 60\ kW$
Total power to be dissipated by the cooling system ( $P_A + P_G + 0,8\ P_F$ )	63 kW
Equivalent thermal output	3780 kJ/min (900 kcal/min)
Flow rate of returning water	approx. 1,5 l/min
at returning water temperature of 20 °C	approx. 1,7 l/min
at returning water temperature of 90 °C	
Volume of generated vapor	approx. 2,5 m <sup>3</sup> /min
at returning water temperature of 20 °C	approx. 2,8 m <sup>3</sup> /min
at returning water temperature of 90 °C	

Detailed information on vapor cooling upon request. Please observe instructions on vapor cooling given under "Explanations on Technical Data".

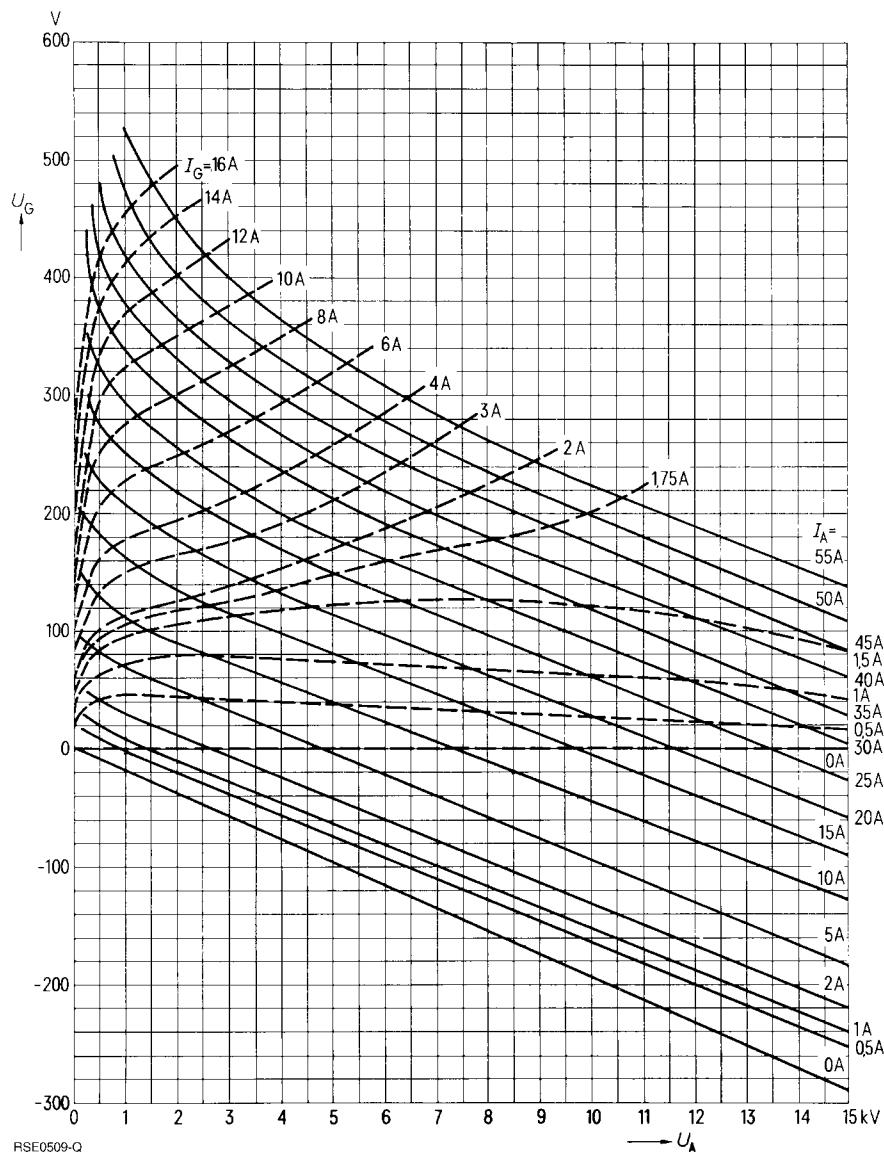

**Safety precautions**

The section "Safety precautions" under "Explanations on Technical Data" describes how the tube is to be protected against damage due to electric overload or insufficient cooling. A copper wire with 0,26 mm diameter should be used to test the anode overcurrent trip circuit.

For protection against thermal anode overload the tube fuse RöSich4 is recommended. In conjunction with pull switch RöKt11 it disconnects the voltages at the tube in case of overload (see accessories).

$$U_G = f(U_A) \quad \text{Parameter} = I_A \text{ ---}$$

$$\text{Parameter} = I_G \text{ - - - - -}$$
