

Ordering code Q51-X2794

Coaxial metal-ceramic tetrode, forced-air-cooled, for frequencies up to 110 MHz, particularly suitable for single-sideband communications transmitters up to 11 kW.

- ① Do not use as terminal  
② Air inlet

Approx. weight 8,5 kg

**Heating**

Heater voltage	$U_F$	7,5	V
Heater current	$I_F$	$\approx 75$	A
Heating: direct			
Cathode: thoriated tungsten			

**Characteristics**

Emission current at $U_A = U_{G2} = U_{G1} = 400$ V Amplification factor of screen grid at $U_A = 3$ kV, $U_{G2} = 750$ to 1000 V, $I_A = 2$ A	$I_{em}$ $\mu_{g2g1}$	22 4,8	A
Transconductance at $U_A = 3$ kV, $U_{G2} = 750$ V, $I_A = 2$ A	$s$	36	mA/V

**Capacitances**

Cathode/control grid	$C_{kg1}$	$\approx 54$	pF
Cathode/screen grid	$C_{kg2}$	$\approx 6,0$	pF
Cathode/anode	$C_{ka}$	$\approx 0,2$	pF <sup>1)</sup>
Control grid/screen grid	$C_{g1g2}$	$\approx 84$	pF
Control grid/anode	$C_{g1a}$	$\approx 1,0$	pF <sup>1)</sup>
Screen grid/anode	$C_{g2a}$	$\approx 22,5$	pF

**Accessories****Ordering code**

Socket (header connector)	RöFsg2794	Q1001-X27
Air duct	RöAnst2794	Q1001-X84

1) Measured by means of a 50 cm diameter screening plate in the screen grid terminal plane.

**RF linear amplifier,  
single-sideband modulation, grounded cathode circuit,  $I_{G1} = 0$**

#### Maximum ratings

Frequency	$f$	30	MHz
Anode voltage (dc)	$U_A$	8,0	kV
Screen grid voltage (dc)	$U_{G2}$	1,5	kV
Control grid voltage (dc)	$U_{G1}$	- 500	V
Cathode current (dc)	$I_K$	4,0	A
Peak cathode current	$I_{K\text{ M}}$	22	A
Anode dissipation	$P_A$	12	kW
Screen grid dissipation	$P_{G2}$	300	W
Control grid dissipation	$P_{G1}$	75	W

#### Operating characteristics

Output power	$P_2$	0	12,5	6,25	kW <sup>1)</sup>
Anode voltage (dc)	$U_A$	7,5	7,5	7,5	kV
Screen grid voltage (dc)	$U_{G2}$	1,25	1,25	1,25	kV
Control grid voltage	$U_{G1}$	- 260	- 260	- 260	V
Peak control grid voltage (ac)	$U_{g1\text{ m}}$	0	240	240	V
Anode current (dc)	$I_A$	0,9	2,65	1,8	A
Screen grid current (dc)	$I_{G2}$	0	120	56	mA
Anode input power	$P_{B\text{ A}}$	6,7	19,9	13,5	kW
Anode dissipation	$P_A$	6,7	7,4	7,25	kW
Screen grid dissipation	$P_{G2}$	0	150	70	W
Efficiency	$\eta$	—	63	46	%
Anode load resistance	$R_A$	—	1560	1560	$\Omega$
Third order intermodulation product	$d_3$	—	—	$\geq 44$	dB <sup>2)</sup>
Fifth order intermodulation product	$d_5$	—	—	$\geq 50$	dB <sup>2)</sup>

I No modulation

II 1-tone modulation

III 2-tone modulation

1) Circuit losses are not included.

2) Intermodulation product calculated from the total characteristic measured by the differential method at  $i \approx 3$  MHz.

### Tube mounting

Axis vertical, anode up or down.

For connection of the tube use the terminals listed under "Accessories".

### Maximum tube surface temperature

The temperature of both the metal-ceramic seals and the anode body must not exceed 250 °C at any point.

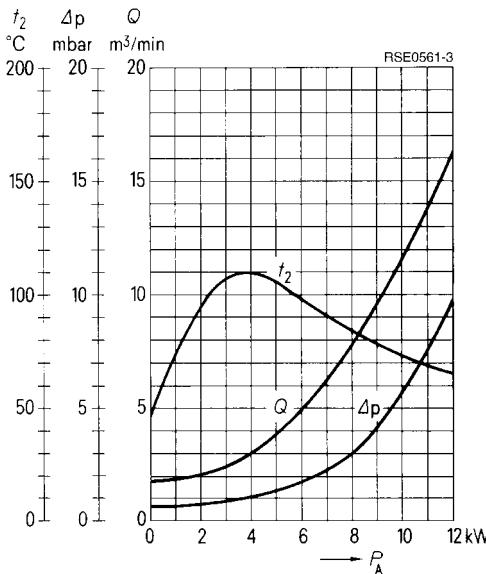

### Forced-air cooling

The minimum air flow rate required for maximum anode dissipation is given in the cooling air diagram valid for 25 °C inlet temperature at a normal air pressure of 1 bar (sea level). The cooling air must be supplied from the side of the electrode terminals. For further information on forced-air cooling refer to "Explanations on Technical Data".

### Safety precautions

The section "Safety precautions" under "Explanations on Technical Data" describes how the tube is to be protected against damage due to electric overload or insufficient cooling. A copper wire with 0,20 mm diameter should be used to test the anode overcurrent trip circuit.

### Cooling air diagram

The cooling air is supplied from the electrode terminal side.

Air pressure = 1 bar

$t_1 = 25^\circ\text{C}$

$$U_{G1} = f(U_A)$$

$$U_{G2} = 750 \text{ V}$$
