NOTES:

- (1) For operation in a 525 line, 30 frame system as described in "Standards of Good Engineering Practice for Television Broadcast Stations; Federal Communications Commission," the duty cycle of the voltage pulse must not exceed 15% of one horizontal scanning cycle.
- (2) Larger values of grid-circuit resistance may be used if provisions are made to protect the tube.
- (3) Duty cycle of the pulse must be less than 2.5%.
