NOTES:

¹Averaged over any audio-frequency cycle of sine-wave form.

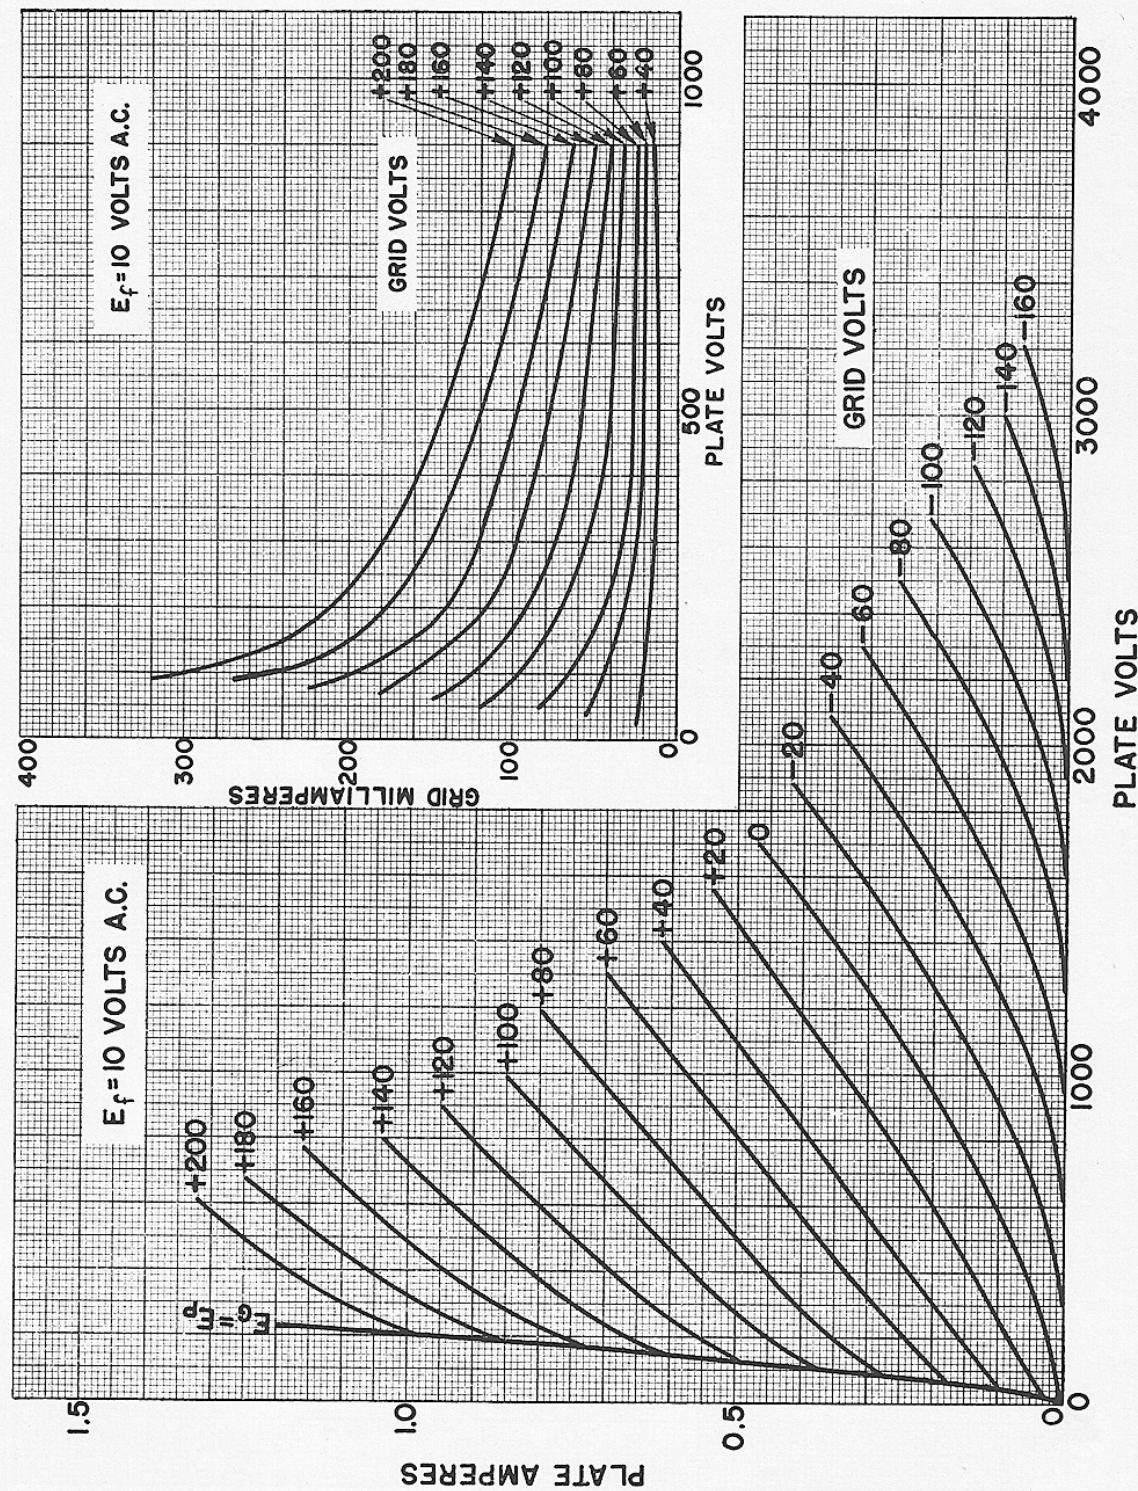

²Grid voltages are given with respect to the filament operated on A.C. If D.C. is used, each stated value of grid voltage should be decreased by 5 volts and the circuit returns made to the negative end of the filament.

³At crest of audio-frequency cycle with modulation factor of 1.0.

⁴Modulation essentially negative may be used if the positive peak of the audio-frequency envelope does not exceed 115% of the carrier conditions.
