**TEMPERATURE LIMITS (Absolute limits)**

Inlet temperature	$T_i$	max.	50	°C
Temperature of filament seals		max.	210	°C
Temperature of grid and anode seals		max.	180	°C

**ACCESSORIES**

Filament connectors	40634
Connector centre pin of filament	40649 <sup>2)</sup>
Grid connector	40622
Water jacket	K713

**In general**, no air cooling will be required at frequencies up to 30 MHz and at ambient temperatures below 35 °C.

At higher frequencies or at higher ambient temperatures a low-velocity air flow to the grid and filament seals will be necessary.

<sup>1)</sup> At water inlet temperatures between 20 and 50 °C the required quantity of water can be found by proportional interpolation

<sup>2)</sup> The centre tap  $f_c$  (diameter 10.5 mm; marked O) must not be used for filament current supply. The connector type 40649, however, must be used for the cooling of this pin
