

## 21BCP4 CATHODE-RAY TUBE

21-INCH, RECTANGULAR GLASS FOCUS—ELECTROSTATIC DEFLECTION—MAGNETIC 70-DEGREE DEFLECTION ANGLE

191/8- BY 143/16-INCH PICTURE SIZE FACEPLATE—SPHERICAL, GRAY EXTERNAL CONDUCTIVE COATING ALUMINIZED SCREEN

## DESCRIPTION AND RATING

The 21BCP4 is a rectangular all-glass picture tube which provides a  $19\frac{1}{8}$  by  $14\frac{3}{16}$ -inch picture for direct-view television reception. It employs electrostatic focusing and magnetic deflection. The outstanding feature of this tube is the fact that it does not require an ion-trap magnet; thus better resolution at all times is assured. Other features of the 21BCP4 include a high-quality fluorescent screen which is aluminized to increase light output, a gray faceplate which improves picture contrast, and an external conductive coating which serves as a filter capacitor when grounded.

- \* All voltages are measured with respect to cathode.
- † The maximum ratings provide a ten-percent safety factor in accordance with the standard design-center system of rating cathode-ray tubes. The tube will withstand the combined effects of variations in line voltage and components provided the maximum design-center values are not exceeded by more than ten percent.
- ‡ Anode, grid-No. 3 and grid-No. 5 which are connected together within the tube are referred to herein as anode. If this tube is operated at voltages in excess of 16,000 volts, x-ray radiation shielding may be necessary to avert possible danger of personal injury from prolonged exposure at close range. The protective face-viewing window of apparatus using tubes of this type may provide such a safeguard. If the radiation measured in contact with this window does not exceed 6.25 milliroentgens per hour, the window will normally provide adequate protection.
- § Cathode should be returned to one side or to the midtap of the heater transformer winding.
- $\pi$  Brightness and focus quality decrease with decreasing anode voltage. In general, the anode voltage should not be less than 14,000 volts.
- ▲ For visual extinction of focused raster.

## NOTES:

- I. REFERENCE LINE IS DETERMINED BY THE PLANE OF THE UPPER EDGE OF THE REFERENCE-LINE GAGE (RETMA NO. 110) WHEN THE GAGE IS RESTING ON THE CONE.
- 2. DEFLECTION ANGLE ON DIAGONAL IS 70°.
- 3. ANODE TERMINAL ALIGNS WITH PIN-NO.6 ±30DEGREES.
- 4. APPROXIMATE POSITION OF CENTERING MAGNET, IF USED.
- 5. EXTERNAL CONDUCTIVE COATING CONTACT AREA.
- \* THIS SET OF VALUES ALSO POSSIBLE.
