| Grid No. 1 Voltage ³ | |
| AF Grid No. 1 Voltage (RMS)..... | 1.0 Volts |
| AF Signal Source Resistance..... | 200,000 Ohms |
| Plate Current ⁴ (Signal Applied)..... | 2.5 Ma |
| Load Resistance..... | 3500 Ohms |
| Power Output..... | 10 Mw |
| Total Harmonic Distortion..... | 10 Percent |

NOTES:

1. This tube is intended for use in automobile radios operated from a nominal 12 volt battery. Design of the tube is such that the heater will operate satisfactorily over the range 10.0 volts to 15.9 volts, and that the maximum ratings provide a safety factor for the wide voltage variation encountered with this type of supply.
2. Contact potential bias developed across a 2.2 megohm resistor.
3. Bias voltage is developed across a 15 megohm resistor by means of Grid No. 1 rectification (obtained when applying the specified signal voltage) and contact potential.
4. With no signal applied to Grid No. 1 and bias developed solely by contact potential, the plate current is 6.0 ma.

APPLICATION

The Sylvania Type 12EM6 is a miniature diode-tetrode designed for use in automobile receivers. The diode section is intended for use as a detector while the tetrode section is designed to be used as a power amplifier driver. It is designed for operation where the heater, plate and screen voltages are supplied directly from a 12 volt automotive storage battery.
